## Bumper bundle!

Treachery is the name of the game this issue. Mike Singleton has come up with an amazing computer moderated board game all about international espionage and intrigue. Inside this issue you'll find a special pull out map to help you play the game together with the counters on the front cover.

It's a real first for C&VG — and we're convinced you're going to love playing it. Treachery begins on page 76 — and you'll find the map on our centre pages.

We've also managed to find space for a rundown of the best joysticks around — for micros and home video systems. Our Joystick Jury pronounce their verdict on page 50.

We take a look at the way laser discs could cause a revolution in home computer games playing in much the same way as they've stirred up the arcades.

## Features

**MAILBAG** 5  
The One goes Dutch, while elsewhere we can hear music playing

**COMPETITION** 14  
Sherlock Holmes Adventures up for grabs! We also announce the winners of our Golden Joystick Awards

**HALL OF FAME** 56

## PRINT AT CONVERSION

Dear Sir,  
I have a tip for all Commodore and Sharp M280 series owners to help convert the PRINT AT and VTAB/HTAB commands found in machines like the Spectrum and Apple II.

At the beginning of a program or during initialisation, type in this line: LET CDS = ("home) (23 cursor down)". For machines with a different number of lines, adjust the number of cursor downs needed.

Then at every occurrence of a PRINT AT Y,X or VTAB,HTAB X, type in PRINT LEFT\$(CDS,Y)/TAB(X) instead. This modification can also be used to scroll the screen up one line. Just enter PRINT CDS;

However, for Vic-20 owners, they may run into problems if they try to convert listings with print statements from machines with a longer line length because the Vic-20's screen is so narrow. Extensive modification to listings may be needed.

Soh Kam Yung,  
Perak  
West Malaysia

## NO PROBLEMS WITH SHARP

Dear Sir,  
Reading your latter columns, I am surprised by the number of people who seem to have frequent problems with their micros.

I have just clocked up my 2,800th hour of use on my Sharp M280B. In that time (nearly 18 months), I have never had the slightest hardware fault on the micro, or its drives, or its printer. I don't suggest that this machine is unusually reliable. What I do suggest is that, given reasonably careful treatment (not pouring coffee

over your disks, for example), any modern micro is a very reliable machine.

Or are people complaining unnecessarily? I note in the same issue that a correspondent's Dragon is not "saving" correctly to cassette, and the joystick's ports are reversed.

For the first, has he tried cleaning the cassette heads? — It is not always realised that the heads should be cleaned at least as often as those on audio machines. For the second, I suggest five minutes judicious work with the home soldering iron at least once a fortnight would probably solve the problem. Neither seems to call for workshop attention.

As for attempting word-processing on either the Spectrum (with its eccentric key-pad) or the Vic-20 (with its tiny memory) — I'd stick to the Dragon, or switch to the Dragon 64.

On two points of detail: You say (in Program Extra, Jan '84 issue) that Basic originated in a British university. Can you confirm, please, as every reference book I have gives its origin as Dartmouth College (USA).

Secondly, I would query that Basic is the most widely understood language. As a professional programmer working in both industry and commerce, I always use COBOL and FORTRAN (and other languages are still in use — PLI, ALGOL etc.) I have never heard of a mainframe program in Basic, and in any event, Basic is terribly slow. Is it really the most understood language? Most schools are turning to PASCAL.

R. H. Hill,  
Woodford Green,  
Essex.

Editor's reply: Thanks for your interesting letter Mr Hill. As to your query about the origin of Basic, the reference books we have mention a British university.

## MUSIC WHILE YOU PLAY!

Dear Sir,  
How about having a hints and tips section in the magazine? I for one can disclose that I do much better at Arcadia if I have *Sweet Dreams* by the Eurythmics playing, and if anyone can advise on a fool-proof method of getting through level seven please tell me!

One other tip. How to get through all the levels in the excellent Matrix from Liamssoft: Yes all! Perhaps it's just a chance occurrence with my copy. But if you press RUN/STOP, CTRL, SHIFT and the Commodore key all at the same time, you get the "ZONE CLEARED" message, an extra life, mystery bonus three, (3000 points) and you move on to the next level! Level 20 is unimaginable! If anyone can do it — they cheated!

Andrew Duley,  
Godalming,  
Surrey.

Editor's reply: Hints and tips — what about Bug Hunter and Program Extra? Thanks for the musical note — has anyone else got a favourite tune to play games by?

## IN DEFENCE OF THE ORIC

Dear Sir,  
I find the amount of misinformation given in computer magazines on the Oric-1 most annoying, and seemingly arising from ignorance of this relatively new machine. I received mine in February of last year and am well satisfied with its capabilities. Let me point out some of the errors in your review.

Games ports: the Oric 1 has an expansion port which Oric say can be used for "cartridge software", but as yet none is available.

Keyboard: your use of the

word "membrane" is misleading. The Oric keyboard consists of 57 rigid-plastic, moving keys which, in my experience, provide more positive feedback, control and speed than the rubbery Spectrum.

Text display: the Oric text screen consists of 28 rows of 40 columns, being teletext compatible. The first two columns are used for background and foreground colours, but can be accessed by F0KEing or using CONTROL, J.

Sound: this is probably the Oric-1's best feature. There are three channels. Seven octaves of ordered, musical notes are available and also some 4000 other frequencies. You can also get white noise. Seven envelope modes are available, the duration of each being controllable.

User defined graphics: these are available on an 8 x 6 matrix, the two left — most bits in each row being used to tell whether a character is an attribute or not.

Italic Greek characters: can you please tell me how to access these, as I've never seen them.

Editing: insertion of text to a line is possible! All you do is to copy the part of the line you need then, when you want to insert something, cursor out of the program line, type what you want to put in and then return to where you left off in the line. When you next list the line, you will find that your text has been magically inserted. It becomes a very convenient system of editing after practice.

Furthermore, the only bug I have found is the TAB function, but this can be bypassed.

I hope this letter has gone some way to clearing up the dense mist of mystique which surrounds one of the most competent, value-for-money machines on the market. Duncan Barford, Litchingborough, Northants.

## THE ORIC GOES DUTCH

Dear Sir,  
In the December issue of *C&VG* you featured a review of the Oric-1 computer, but unfortunately some errors seem to have crept in. The user defined graphics are 6 × 8 instead of 8 × 8 and the text display is 38 by 27.

The Oric does have a facility to insert and delete text. To insert text, Control 'A' to the position where the insertion is to be made, then use the cursor-up key to go up one line. Type the text that is to be inserted and then use the cursor-left key to go back to the place where you left the original line. Then use cursor-down to put you on that line and control 'A' to the end of the line. Finally EDIT that line to see if the insertion is correct. To delete part of a line or close a gap, use the cursor-right key to go over that part of the line and again EDIT the line to see if it is correct.

To get a text screen of 38 by 28 use the following subroutine DOKE 621,47960 POKE 633,28:CLS To speed up the metropolis of the keys use POKE 775,10, to slow it POKE 775,253. The normal value is 39. To adapt the predefined PING, SHOOT, EXPLODE commands, put the following command behind it, PLAY 1,7,A,B (A = 1 to 7/B = 0 to 65535 or 32767 depending on your Oric).

The Oric also has a very hidden and very devious bug namely in the IF...THEN...ELSE statement. It has the tendency to add an Y to the variable-name before the ELSE. Here is a small program to cure this

```
10 BEGIN=&400: POS=
  BEGIN
18 REPEAT
20 READ DTA
25 CHECK = CHECK + DTA
  POKE BEGIN, DTA
  BEGIN = BEGIN + 1
30 UNTIL DTA = 255
40 IF CHECK <> 2838 THEN
  PRINT "Sorry, typing
  error" END
50 DOKE 6FO, BEGIN END
100 DATA &C9, &C8, &D0, &D5,
  &D0, &B1, &CA, &D0, &D7
  &C9, &D0, &F0, &F7, &4C,
  &E8, &D0, &FF
```

'For E read hash character.

Hopefully some of the more stubborn people who have kept their Oric have some benefit from these suggestions. I've given up on Oric Products' vague promises of bug-free ROMs and soon-to-come-out peripherals and, because of the lack of good and original software, I've traded in my Oric for a Spectrum. *Paul Kolenbrander, Eindhoven, Holland.*

## BUG-BYTE BITE BACK

Dear Sir,  
I was most upset to read an article entitled 'Just what is going on here', concerning Manic Miner, in the January issue of *Computer and Video Games*. The information given was nearly all false, and I am surprised that you have not checked with us. I would like to make the following points:—

- 1) Matthew Smith was never a Bug Byte employee — he worked on a freelance basis.
- 2) There was no clause in his contract giving him the right to force Bug-Byte to withdraw Manic Miner. The very idea is ridiculous.
- 3) There were no rumours of falsified sales figures that we know of.
- 4) There was never any dispute between Matthew Smith and Bug-Byte over missing royalties. He has been paid over £20,000 in royalties to date.
- 5) We have not lost all rights to the sequel — we are shortly to release an upgraded version for the Commodore 64. Also, we have registered the name 'Manic Miner' as a trade mark.

The essential reason why we lost the original Manic Miner is that Matthew Smith is 17 years old — i.e. a minor (no

pun intended), which means that the validity of his contract with us would be a matter of dispute in a court of law. We have better things to do than fight long and expensive legal battles, especially over a program which was past its peak.

We now have a new form of contract for programmers under 18, which is to be signed by parents or guardians.

As you can now see, your article was unnecessarily damaging to Bug-Byte and I would be grateful if you could publish the truth on this matter to put things right.

*A. D. Baden,  
Director,  
Bug Byte,  
Liverpool*

## REPAIRING THE RAM!

Dear Sir,  
Please could you tell me if there is anywhere I can send my lousy RAM-pack to be repaired? It's a ZX81 16K RAM-pack and I received no guarantee with it.

I get *C&VG* regularly, but have never seen an advertisement for repairs. *Simon Pritchard, Sharnbrook, Bedfordshire.*

**Editor's reply:** Sinclair Research Ltd, 23 Motcomb Street, London SW1 are the people to contact about repairing your RAM-pack. However, due to the low price of 16K RAM-packs, it may be cheaper to buy a new one. If you do — make sure you get a guarantee!

## MORE GAMES FOR VIC?

Dear Sir,  
You stated in your 'Games Players' guide to the Micro, in your December issue that the Spectrum is backed up by the largest amount of games software available for any current machine. This is not true.

If any Spectrum owners have compiled a list, then I would expect there to be about 500 titles. In comparison, there are over 1,000 titles for the Atari or Apple, a figure approaching

that for the Commodore 64 and, according to the file I have compiled on my micro, 1,615 titles for the Vic-20 — about 95 per cent are games.

Interestingly, it would cost £19,580 to acquire all the Vic software. This may seem a lot, but bear in mind that the odd low business and utility programs are expensive, and many titles are on cartridge. There are approx 190 Vic cartridges.

I am not patting myself on the back for buying a Vic, although much of its software is excellent. I wish I had a Spectrum so that I could play *Scrabble*, *Ant Attack* or *Atic Atac* and get onto *Micronet* 800 and *Prestell*.

Let me leave you with a final point. Why isn't there at least one shop in London with a decent range of software on display for any of the above mentioned machines, selected by someone who owns a micro?

I reckon the first store to risk more than a grand on stock will suffer from the old beaten path syndrome.

*John Keogh,  
North Finchley,  
London*

## JOIN THE CLUB!

Dear Sir,  
I am writing to inform you of an Adventure Club I am starting. This Club will consist of a file kept on every member which will have: Name, Address, Tel, Computer type and a list of the Adventures that they have or have not solved. Also there will be a newsletter published each month which will have reviews and articles that have been sent in by the members. There will also be an area in this letter for people to sell and buy finished programs and such.

There will, of course, be a membership fee of £1.75 which I hope will cover costs. I am open to suggestions and questions and you can get in touch with me on 542294 (9am-5pm) 741013 (before 9 or after 5) *Christopher Tihanyi  
23-25 Houlton St  
Enstrol,  
BS2 9DH*

# SCREENPLAY

134 St. Vincent Street, Glasgow G2 5JU. Telephone 041-248 2481

**CHICKAROO:** A word recognition game for children. Find the missing letter in the name of this game which can be used by up to four players.

**PIRATES:** A childrens game based on word recognition. Identify the concealed word before you reach the end of the plank or else face the perils of the deep.

A vocabulary of 100 words is supplied with both of these games, however, parents have the option of adding their own data tiles.

## BBC EDUCATIONAL

**MAD MONTY:** It's mealtme for MONTY the MAD python and frogs are on the menu! Guide him round the garden gulping frogs and munching magic mushrooms — beware those toadstools and if you keep your cool mouse may be on the menu.

**THE ANIMATOR:** The perfect DRAGON graphics tool allows you to define your own characters and then make them spring to life on the screen. The animated routines can then be saved on tape and combined with others to create your own games.

## DRAGON 32

**THE ILLUSTRATOR:** A graphics design package which can be used in a graphics Modes 1 or 2 to generate full colour illustrations on the screen of your micro. This package allows graphics and text to be mixed on screen and saved on tape for later use.

**MAD MONTY:** A fast and furious version of the snake in the garden game for the MODEL B BBC MICRO. Monty — the well known python — lives in a garden inhabited by juicy flowers. Help him munch his lunch but mind those rocks and wells!

## BBC GAMES AND UTILITIES

**MAD MONTY:** This version of the snake game has 7 screen layouts and five speeds from sublime to ridiculous. Monty munches frogs for lunch and is partial to the odd mouse for afters.

**COMING SOON** Compleats machine code toolkit for the 64 Assembler, Disassembler, Monitor, Hex dump.

## COMMODORE 64

## SCREENPLAY SOFTWARE MORE FUN THAN GAMES

Our range of softwars includes games but we believe that your micro should do more than test your reflexes. For example, **CHICKAROO** and **PIRATES** are educational products designed to help you extend your childrens' vocabulary.

**THE ILLUSTRATOR** turns your TV screen into an electronic canvas. The only limit is your imagination. **DRAGON** users are you bored with other people's games? Let **THE ANIMATOR** help you create your own.

# Don't miss the boat!..

Try Transversion, if you dare! Eliminate the Alien Pods in the Galactic Grid under the protection of their Commanders. It'll make your green fingers itch with excitement! Only **£5.90**. Available for the Spectrum only.

Seek out treasures on the treacherous **Island of Death** but beware the dangers of quicksand, tunnel bugs, giant ants and snakes – to name but a few! For the **Oric 1** only **£6.90**.

**Hunchback** – just like the Arcade original. Rescue Esmerelda but you'll have to swing the rope, jump the ramparts and avoid the arrows, knights and fireballs. It really rings with fun and excitement for only **£6.90**. For the Spectrum, Commodore 64 & **Oric 1**.

The escapades of **Moon Alert** could turn even you into a complete Lunatic! You'll really life-off for only **£5.90**, but we warn you – it's no walkabout. Available for the Spectrum only.

Now you can try your handcap on the testing greens of the famous **Royal Birdale**. Set the wind direction and speed, select your Iron and use your skill to emulate the golfing "greats". At only **£6.90** you'd better join this club now! Available for the Spectrum only.

**Armageddon**, and this could be your last chance to save the Earth from nuclear attack. For only **£5.90** (Spectrum) & **£6.90** (Com. 64) you can command the missile defence battery – don't miss it!

Rescue puts you right in the pilot's seat. Aviate your men to safety away from the enemy tanks and aircraft. Hi-res graphics at low-cost price. Only **£5.90**. Available for the Spectrum only.

The exploits of **Esquimo Eddie** and his faithful pal Percy Penguin can mean only chills and thrills in Santaland with Growler and the Snowbug to hot-up the action. Cracking fun on your Spectrum for only **£5.90**. Conquer the mighty **Kong** in one of the UK's best sellers. Rescue

# ...fun-packed voyages on the Ocean lines – just the ticket!

maiden from the clutches of the mighty  
beast and be a hero for only **£5.90** Spectrum only  
You've never seen anything like **Mr. Wimpy** – the craziest,  
zaniest burger battle to sizzle your screens. The greatest game  
under the bun for only **£5.90** – Spectrum, and  
only **£6.90** on the Commodore 64 and Oric 1

## DEVIOUS DECATHLON

Oh no! Now what — not more competition entries! It's all Eugene's fault for persuading us to have all these great contests in the magazine. Bring back the JCB and start sorting the mail again chaps!

The third great contest in our fun-packed December issue was the Devious Decathlon, created by ace puzzler Trevor Truran. He set you a stiff test of ten puzzles to challenge mentalities everywhere.

Ten Atari VCS home video games centres, plus three Activision games cartridges including the brand new Activision Decathlon game were up for grabs. And it seemed like all our readers wanted to go for gold, judging by the entries.

Anyway, here are the winners who will be receiving their prizes from our friends at Activision. Well done everyone!

The winners, who all got 24271 points out of a possible 24285 are: Ivor Harris, Loughborough, Leics. Nigel Robson, Bishop Sutton, Avon. Simon Hunt, Crafield, Bedford. Peter Hardisty, Wimbledon, London. Patrick O'Neill, Liverpool. J. Thompson, Manchester. I. B. Macneil, Fort William, Scotland. Sue Osborne, Romney Marsh, Kent. Nigel Howson, Broughton Briggs, South Humber-side. Alan Batcheider, Warwick.

Congratulations to mentalities everywhere! But no-one got the triangle question right! The answer, says Trevor, is 65.

## HOLMES — THIS IS YOUR LIFE!

Holmes continued to puff away on his pipe but as he read further down the letter his eyes widened in amazement and he gave a gasp! The figure pushed the window open brandishing a heavy square object that he pulled from his coat. Holmes turned to face him gasped checked the letter: "Oh no! What I read was true!" he cried. The figure gave an evil-sounding laugh and said: "Yes! It was true! Tonight, super detective Sherlock Holmes: This is Your Life!"

This winning entry from Gareth Randall of Essex was just one of several using Eamonn Andrews as the theme in the Sherlock Holmes competition. Other entries which made the judges' eyes widen in amazement were from Mr. R. M. Stewart, Edinburgh, Gar-meo Molner from London, Joshua Dabin and Andia Berghardsson from Iceland.

And finally the last offering to be chosen was from Robin Morley of Nottingham. Holmes exclaimed: "Well I never — a micro-drive order form! That wraps up the mystery of the missing microdrives!" Holmes threw himself to the floor as Ian Logan dived into the room, snatched the form with a cackle and leapt out!

Well done to the six super sleuths — a C&VG thank you on its way to you.

## WHOSE FINGERPRINT . . . ?

Dark and murky things went on behind the scenes while Mike Singleton was writing Treachery for us. There were rumours of industrial espionage and other computer magazines sneaking about the C&VG offices attempting to discover our secrets.

One day when we arrived at the office we found this fingerprint on the door of Bug Hunter's cupboard. We have to keep him locked away at night you see — otherwise he escapes to watch Crossroads and we don't see him again for weeks.

Anyway, can you find your way

through the fingerprint maze and discover just who it was lurking in the C&VG office. By following the correct path to the centre of the print, you'll discover the name of the culprit. And just to make it more interesting, the first ten names out of the C&VG memory bin on March 16th will win some games or a games tape for their computer.

Fill in the coupon below and mail it to Fingerprint Contest, Computer and Video Games, Durrant House, 8 Her-bal Hill, London EC1R 5EJ, to reach us before March 16th.

The culprit was:

Name

Address

Type of computer you own

## NUMBER PUZZLE

The Number Chart puzzle had you all working very hard with the aid of your micros — the correct answer to this brain teaser is 3816547290 and the first seven correct answers out of the C&VG memory bin were: S. Gutierrez from Leicester who solved the problem in just over 80 seconds, R. Porter from Wirral who claims two mins 41 secs, Pedro Miguel Loureiro from Portugal who took just under five mins, G. J. Snaggett from Sussex, Rev. M. Broadhurst, Cheshire, Kathy Morris, BFPO 34 and Paul Hammond from Peterborough. C&VG t-shirts are on their way to you all.

## ESPECIALLY FOR HOLMES LOVERS

So now you know what was in the letter that upset our friend Sherlock so much — but can you answer a few more questions about the super-sleuth? If you can solve The Case of the Ten Questions — a brand new Sherlock Holmes Adventure game from Melbourne House could be yours! We've got 20 of these Adventures for the 48k Spectrum to give away to any of you who can solve the case and get your answers into us by March 16th. The Sherlock Adventure comes from the same team who brought you The Hobbit — so it's going to be good!

Our Adventure expert Keith Campbell has come up with the questions that will test your knowledge of Sherlock Holmes and his Adventures.

Once you've got the answers, send them in to us Computer and Video Games Sherlock Adventure, Durrant House, 8 Herbel Hill, London EC1R 5EJ. And remember the first 20 correct answers will get a prize. Closing date is March 16th. Normal C&VG competition rules apply and the editor's decision is final.

### THE QUESTIONS

1. Who was Holmes' arch-enemy?
2. Where did Holmes keep his cigars?
3. In which London street did Holmes live?
4. In what magazine did the original Sherlock Holmes stories appear?
5. What subject did the creator of Holmes, Sir Arthur Conan Doyle, study at university?
6. What was the title of the very first Sherlock Holmes story?
7. What was Dr Watson's full name?
8. Where did Conan Doyle die?
9. What type of hat did Holmes like to wear?
10. For what was Conan Doyle knighted in 1902?

## THE GOLDEN JOYSTICK AWARDS

You can all stop holding your breath now! The moment you've all been waiting for has arrived. Yes, we're ready to announce the winners of our Computer and Video Games 1983 Golden Joystick Awards.

These are the awards that we hope will become a symbol of excellence in the software industry — a measure of a good software company and good products.

We know that many software houses work hard producing top quality software and provide good after sales service to their customers.

This is what Computer and Video Games hopes to reward by asking you, our readers, to vote for your top game and favourite software house among other categories!

Since we first announced our Golden Joystick Awards, several other award schemes have sprung up — but accept no substitutes, C&VG's joysticks truly reflect popular support for a game or software house because YOU have chosen the winners.

Throughout the year the C&VG office has been flooded with nominations for our various Golden Joystick Awards. A large variety of personal tastes and personal preferences came to light as we analysed the results — proving that one person's favourite game was another person's bowl of cold porridge!

Laterally hundreds of games for all the popular micros were nominated. But despite the number of home computers on the market and the amount of software around — all our award winners were clearly head and shoulders above their competitors.

So, at last, here they are, the 1983 Computer and Video Games Golden Joystick Award winners. A fanfare please maestro!

### GAME OF THE YEAR 1983

1. Jet Pac (Ultimate Play the Game)
2. The Hobbit (Melbourne House)
3. Manic Miner (Bug-Byte)
4. Arcadia (Imagine)

### SOFTWARE HOUSE OF THE YEAR 1983

1. Ultimate Play the Game.
2. Melbourne House.
3. Imagine
4. Llamasoft.

### BEST ARCADE STYLE GAME

1. Manic Miner (Bug-Byte)
2. Penetrator (Melbourne House)
3. Arcadia (Imagine)
4. Zalaga (Ardvark)

### BEST STRATEGY GAME

1. The Hobbit (Melbourne House)
2. Football Manager (Addictive Games)
3. Planet Invasion (Microdeal)
4. Chess (Psilon)

### BEST ORIGINAL GAME

1. Ah Diddums (Imagine)
2. Psst! (Ultimate Play the Game)
3. Ant Attack (Quicksilver)
4. Splat (Incentive Software)

All the Golden Joystick Awards were presented at a special dinner held in London. Representatives from all the top software houses were there to see Radio One DJ, Dave Lee Travis, present the Golden Sticks. We'll have a full report on the celebrations in our next issue.

Don't forget — if you missed your chance to vote in 1983, why not get in first for our 1984 Golden Joystick Awards? Make sure you have a say in the awards by filling in the coupon below. In the meantime, congratulations to all our winners.

## GOLDEN JOYSTICK AWARDS 1984

Introducing the exciting new

## ORIC ATMOS

- Powerful basic operations ROM means huge RAM memory capacity
- Wide range of exciting programs available
- Built-in retronix printer interface (no RS232 needed - just plug in your printer)
- Typewriter-style full-response keyboard
- Separate keys for cursor control
- Built-in speaker
- Serial sound effects for game programmers

HERE'S ANOTHER FANTASTIC FIRST IN HOME MICROS FROM SPECTRUM - the brand new and tremendously exciting **ORIC ATMOS 40K** computer!

The ATMOS has taken a remarkable step forward in home computer technology. But how?

Most Micros waste a large amount of memory on operating functions like graphics, colour and sound. Oric saw that by running these tasks from ROM memory, a huge amount of the ATMOS's valuable 48K RAM capacity could be freed for more advanced operations.

So the colour capability (8 graphics, 8 backgrounds), powerful sound synthesis and high resolution graphics of the ATMOS are achieved with fewer demands on computer power than its competitors.

So what else makes the ATMOS so exciting? There's now a typewriter-style full-response keyboard, it's directly compatible with most domestic cassette players; and there's a wide choice of software. The ATMOS is designed for convenience, too - it uses extended Microsoft BASIC, your printer plugs in without an RS232, and it roms complete with leads and everything you need to get going.

We've a 4-colour Oric printer (which accepts normal paper) at a terrific value-for-money price. Soon a 3" Microdisk Drive will be available, too, to complete the system. Take a look at the superb new **ORIC ATMOS**, in its highly distinctive black and red trim, at your Spectrum dealer NOW!

# The Electronic and Cartoon

Pack up your paintbox, throw away your paintbrushes and move into the electronic age of art with our amazing new PIXSTIK™

PIXSTIK™ opens the way for all the family to create colourful designs and pictures – yet it's so much cleaner and simpler to use than conventional crayons and paints. Plus you have the built-in advantage of the exclusive ABC feature. ABC stands for animate, bounce and cartoon, meaning you can even add movements to your sketches and drawings. It's just like creating your very own cartoon clips.

With PIXSTIK™, the colours never run dry and you don't have to worry about paper supplies. It even has an eraser facility.

You just plug in and all the materials you need are listed on the screen. You'll have access to up to 16 exciting colours and 16 separate commands. Simply give your instructions by pointing PIXSTIK™ at the appropriate colour or command.

PIXSTIK™ couldn't be easier to operate. Whether you're elderly or eighty, you'll find it fascinating, especially when you discover the range of pictures you can produce.

Wherever your imagination goes, PIXSTIK™ will follow. It's

FOR VIC 20 (8K min)

ATARI 400, 600 XL

ATARI 800 OR 800 XL

# Paint Box on Set

you freehand freedom or creates straight lines, triangles, rectangles, circles and ellipses with geometrical precision. Choose whether to fill your shapes with solid colour or leave them blank. And if, after that, you still favour a paintbrush effect, simply move PIXSTIK™ into paintbrush mode and it will do the rest.

What makes PIXSTIK™ even more special is that it doesn't simply stop with a completed picture. Because it incorporates the special ABC feature, you can use individual designs as part of animated sequences and cartoons.

At the "animate" command, pictures stored in memory will reappear in turn. On the "bounce" instruction, your pictures will move forwards and backwards and when "cartoon" is called up, they will reappear continuously in sequence with just the effect of a professional cartoon clip.

Pictures can be drawn using fine lines, blocked lines or paintbrush effects for extra variety

PIXSTIK™ can bring all your pictures to life. Use it to show the sun moving across the sky, smoke curling from a chimney and an arrow hitting its target!

The only limit on PIXSTIK™ designs is your own inventiveness. There are even up to three different stick modes to ensure different colours can be drawn across each other without merging.

**COMPLETE MULTIPACK**  
including  
**PIXSTIK™**  
Paintbox Software  
Instruction Manual  
and  
**3 FREE GAMES!**

There is no limit to the wonderful artistic creations you can produce with a PIXSTIK™ and special PAINTBOX Software - here are just a few examples of its infinite possibilities.

For only \$29.95, the PIXSTIK™ pack includes three superb computer games to play with your stick, plus a comprehensive instruction manual.

No paintbox could ever offer so much. So swap your paintbrush for a PIXSTIK™ today. It's the paintbox of the future.

PIXSTIK™ is available by mail order only, exclusively from Computapix Ltd., Gares Road, Kirby Industrial Estate, Liverpool.

To order and cheque/P.O. for £29.95, payable to:

# SUPERSOFT

*the name to remember*

## for games

For only £8.95 you can buy a game that's exciting, soothing, and frustratingly addictive – all at the same time! STIX looks so different from all those other games that it will seem like being in another dimension when you sit down to play.

CRAZY EGG £8.95

WILDFIRE £8.95

HALLS OF DEATH £8.95

## for business

Show your computer who's master with BUSICALC! Spreadsheet programs are used by large and small businesses to juggle with figures, prepare reports and so on. Some are very powerful indeed. The problem is that they're difficult to learn, and tricky to use – which is why we came up with the BUSICALC series.

Whether you choose BUSICALC 1, BUSICALC 2, or BUSICALC 3 you'll get a program you can understand – and one that almost seems to understand you. Use it in the home, use it for teaching, use it at work – it'll save you time and money.

## for programmers

MIKRO is a full 6502/6510 ASSEMBLER with the power that professional programmers need, yet so simple to use that we recommend it to beginners! The MIKRO cartridge has many other facilities including editing commands and a machine language monitor, all for £57.50.

There's much more for the 64 in the SUPERSOFT catalogue. Ask your computer dealer for a copy, or phone 01-861 1166.

£8.95

DISK OR CASSETTE

A truly remarkable depiction of life cycles in a freshwater environment. A semi-educational programme with high resolution graphics, crammed with thrills, spills and excitement, featuring:

**Amoeba** (Rhizopoda); **Hydra** (Chlorohydra Viridissima); **Dragonfly** (Erythronema Najus); **Bloodworm** (Phylum Platyhemintes); **Jellyfish** (Craspedacusta Sowerbeii); **Beetle Larva** (Macrolea Leachi); **Spider** (Argyroneta Aquatica); **Water Fleas** (Scapholeberis Mucronata); **Bumble-Bee** (Bombus Lapidarius); and our special guest star

## THE COMMON FROG

(Rana Temporaria)

*Awesome . . . in its conception*  
*Brilliant . . . in its depiction*  
*Dynamic . . . in its execution*

"Savage Pond is a real joy. A totally unique concept, well thought out and superbly programmed. Whilst a far cry from the usual arcade action it retains all of the excitement. It is an ideal family game and children and adults alike will marvel at the graphics and storyline . . . you will not find such an original and compelling game anywhere else. Buy it and sit back knowing that one of the most original games ever programmed was written here in Britain." — PAGE 6 — an Atari Users Magazine.

## THE HORRORS OF THE HOLOCAUST

### GROUND ZERO

It's only a game, isn't it?

Nuclear war has figured large in recent computer games. The subject has been trivialised more often than treated seriously — the aftermath of a nuclear strike on Britain usually being portrayed as some adventurer's paradise with scenes of death and destruction being introduced all too glibly and often accompanied by sick and unnecessary jokes.

So it makes a change to come across a game that tries to tackle this controversial subject in a realistic but sensible way.

Ground Zero is a new game that tries to get away from the "glamorous" view of the holocaust. The programmer has spent months researching and writing the game in order to bring home the awful reality of a nuclear attack and its ensuing consequences.

Colin Smith, the author of Ground Zero, is so determined that the game should be available to the public that, if he cannot find a software company to back his game, he is prepared to auction off his house to raise the capital to launch it. Now, there's commitment for you!

The game is set in London suburbia and the player takes on the role of an ordinary citizen trying to survive in the devastated capital. Food and water and a fall-out shelter must be found before you perish from radio-active contamination, so it's a race against time.

Smith hopes the game will convince young people of the utter futility of the present arms build up and expose the inadequacies of the Government's 'Protect and Survive' civil defence programme.

We hope he succeeds, as this is definitely a game with a worth while message.

## HAPPY HARVESTING ... HIC!

### HARD CHEESE

Do you fancy a trip into the countryside and a drop of bust buster? Hard Cheese is a story of country life and bringing in the harvest. The crop in your field is more than unusual. Driving your forklift across the fields, you must harvest the crop of stilton cheese and barrels of Walney's best butter.

As the forklift operator, the bare ground, crop-hoppers appear and begin to attack the harvester. The farmer has two lines of defence. The first is to spray green doses of lethal agroicide. But if the crop-hoppers become more troublesome, then you will have to resort to throwing your supply of prize Cox's apples to discourage them. You can steel Farmer Giles round one of three different levels and you might even get your name on the Glory Board hi-score table.

The game uses full colour, hi-res graphics and the manufac-

turers recommend the game for hoppeicidal maniacs everywhere.

Available from D K Tronics costing £4.99, for the 16 or 48k Spectrum.

And remember don't go overboard on the beer, will you now!

## INSIDE THE SILICON CHIP SHOP

All the action in a new computer game takes place in a silicon chip and not on a TV screen.

Silicon is set in the heart of a video game machine, in its central processing unit. The chip is under constant attack from Clutches — deadly power surges! Your only hope of losing them is to run along the maze of logic gates inside the master chip to confuse them.

Whilst enjoying the lighthearted characters from the arcade game and help them escape to freedom through the I/O Port. The game is produced by Remik Software for the Atari computers and costs £9.98.

Remik has also recently released a range of software for the new Acorn Election. The range includes Birds of Prey, Atom Smasher and Alien Break. In all these games have been conceived from Remik's existing stock of BBC games and cost £6.75.

## DODGE THOSE DASTARDLY DUMMIES!

### WAX WORKS

Two new adventure titles have been added to the already large range of Mysterious Adventures from Digital Fantasy.

The first, Wax Works, is a gruesome nightmare adventure set in a deserted wax works museum. Trapped in the building, you become more and more anxious as night falls and dark shadows start creeping across the museum. Your worst fears are soon confirmed — the wax works exhibits are moving! The wax dummies are after your blood. You'll have to fight your way out past Jaws IV the shark and dodge the arrows of a wax incarnation of Robin Hood.

The second game After the Fall, is a survival adventure set in a Britain devastated by nuclear weapons. You're one of the few remaining survivors who hasn't succumbed to radiation sickness. Many horrors await you as you travel across the radiation-polluted wastelands in your journey to find more survivors in an attempt to start rebuilding the ravaged society.

Wax Works and After the Fall are available from Digital Fantasy for the BBC and Spectrum computers for £9.95. Both Spectrum versions work with the Cniah Speech Synthesiser.

# G·A·M·E·S N·E·W·S

## THE CUTEST MONSTERS EVER!

### FLAK

Turn the clock back and take part in an adventure in man's prehistoric past.

Flek transports you backwards through time into an era when uncivilised cavemen inhabited the Earth.

In the game you play the part of Flek, a nomadic caveman travelling across the rugged countryside of the Pliocene age. Club in hand as you trek over and mountain ranges and dusty hee less savannahs, you'll have to contend with wild animals and ward and exotic monsters.

The game is animated just like a TV cartoon of Tom and Jerry and, claim the manufacturers, Flek features the cutest monsters ever seen in a video or computer game. The company are remaining very light-lipped about the game but are quietly confident that it will become one of the hottest new titles of '84.

Flek is produced by Aduvark Software — of Zalage fame — costing £6.95 for the BBC computer and possibly for the Acorn Electron too!

## URGENT! PROGRAMMERS WANTED

### K-TEL

Commodore 64 owners could well find their micro making them a lot of money in the near future.

K-Tel the well known record company has recently stepped into the computer games market with a range of six 'deniable order' cassettes, including the very successful 'It's Only Rock 'n' Roll' and 'Diocletian's Tomb'.

Anxious to follow up recent successes the company are looking for new, inventive, fun

and original games software for the Commodore 64 and Spectrum computers.

K-Tel are offering high royalties and are only interested in high quality software. There's no need to worry if you're not the world's greatest programmer, but have an exceptionally original idea for a game because K-Tel are just as interested.

Interested programmers can get in touch with Mike Dixon at K-Tel International, 620 Western Avenue, London W3 0TU.

## RAISE HELL WITH THOSE DEVILS!

### HELL-GATE

Hell-Gate is the sequel to the smash hit game for the Vic 20 called Laser Zone.

The game is set in the farthest reaches of space and you have been hired to guard the only exit to the next universe, known throughout the galaxy as Hell-Gate.

The black hole is protected by the most awesome stockpile of military power ever assembled. You control a total of four laser bases capable of firing 16 photon torpedoes simultaneously. The gateway comes under constant attack from alien devils and, as

time progresses, the aliens begin to mutate and will split into two when hit by a laser. Later reinforcements become resistant to laser fire and two or three shots may be needed to see them off.

Supply ships are continuously dumping cargo shipments into your area, so shooting the invaders becomes more and more difficult without hitting the highly explosive cargo.

If you become hopelessly overpowered, you can use one of the limited supply of smart bombs you possess to destroy all the alien beings on the screen.

Hell-Gate will be available from Datasoft for the unexpended Vic 20 in mid February costing £6.00.

## PI-MAN GOES ON A PUB CRAWL

### PI-EYED

Pi-man launched him, Groncho made him an international star but now success has gone to his head. The pressure has proved too much for the Pi-Man and he has hit the bottle!

Pi-eyed, chronicles the Pi-Man's slow decline into alcoholism. Stumbling from pub to pub in PiLand he causes havoc and destruction wherever he goes.

The Pi-Man can never refuse a pint and can't leave any ale house without downing every drink on the bar. On his drunken travels he must evade angry motorists, avoid slipping on split beer or sleeping on crisp packets!

The cassette also includes a free record of the Pi-Man's adventures on the B-side.

Pi-eyed is available from Automata UK Ltd for the 48k Spectrum in late January for £5.50.

## YOU'VE SEEN THE TV SERIES . . .

### BBC MICRO

Following the success of their TV series, *Making the Most of the Micro*, the BBC has launched a book and software cassette to document the last series of the programme. These haven't been released as a guide to the TV programme, but more as a sort of "best of" review.

Many of the programs have been revised or improved and the cassette contains programs ranging from advanced graphics and accounting to artificial intelligence demonstrations.

The author of the package claims that even people who don't own a BBC will benefit from reading the book, as the listings have full instructions and are liberally sprinkled with comments and tips throughout.

Probably the most interesting chapter in this book is about the last growing science of artificial intelligence. The cassette includes two programs demonstrating how it's possible for a computer to learn from its mistakes.

*Making the Most of the Micro* is available from the BBC's very own software company, BBC Soft, in late January.

## MINER WILLY FEELING JADED!

### CHINA MINER

Looking at a new game for the Commodore 64 I had a very strong feeling of déjà vu. Read on and see if you think China Miner sounds vaguely familiar.

The game is set in far off China in an abandoned jade mine. The hero of the game is Miner Willy — sorry, I meant Wolly!

The game has 20 levels. To

leave each sheet, you must first collect the hanging keys and open the door to the next level of the mine. Wolly has to cope with collapsing floors, conveyor belts, laser guns and perilous hover mowers before he can collect every single key.

Several other well known computer game characters pop up in the game, including Horace of Ski-ing Time and Jumping Jeff. Hasn't he got a brother called Jack?

I have to applaud Interceptor Micros for their utter cheek if not for their originality. I wonder

if Bug Byte and Pison think it's quite as funny? Clearly a case of 'same game, different name'.

Tongue in cheek computer games seem to be all the rage. Programmers like Jeff Minter and Matthew Smith of Software Projects think nothing of taking a swipe at fellow programmers. Smith's best selling game, *Monic Miner*, features a very realistic caricature of one of Imagine's top games writers, though I don't think Engage would agree.

Chene Mimi is available from Hampshire based Interceptor Micros costing £7.00.

## FOUR FOR THE PRICE OF ONE!

### SPACE ODYSSEY

Computer games are gradually becoming more and more complex. A good example of this is a new series of four games for the Spectrum called *Space Odyssey*.

The four games form an epic arcade style adventure through time and space. The first part is called *Sentinel* in which you have to guard the gateway to your universe from attacks by alien space squadrons.

*Fireflash*, part two of the adventure, concerns the attack of the enemy forces of your home planet. The future of the planet is in your hands.

The saga is continued in *Proteus*. Fresh from your victory on your home planet you must blast your way through the remaining elements.

*Space Odyssey* is concluded in the *Avenger*. You have finally reached the enemy planet. Can you destroy enough alien installations to win the final battle?

The four games can be bought in a special pack for only £14.95 or separately for £5.90 each from Abernys Programs for the 16 or 48K Spectrum.

## SINCLAIR'S QUANTUM LEAP!

The new computer from Sinclair, the QL, was launched in the middle of January. It is totally unlike anything currently available, and is supposedly aimed at the small-business user.

However, it has all the potential of becoming a classic games machine. QL stands for Quantum Leap — which it certainly represents. The machine is not based around cassette storage but on the new micro-drive. It has two of them built in and you can add up to six more. If you wish.

The machine has a 16-bit chip at its heart, which means that it is totally incompatible with the Spectrum. It will not run Spectrum software, and microdrive cartridges can only be read by the own machine. There is no cassette interface at all, so all software will be on microdrive or ROM cartridge.

### SINCLAIR

The machine has 128k of RAM and is capable of running a 80K Basic programme in hi-res graphics.

The computer is very fast, and runs a new version of Basic written by Sinclair and called SuperBasic.

It comes with lots of application programs on Microdrive including a very powerful word processor, RS232 interface and joystick ports are built in.

Despite what Sn Clavin said at the launch, expect a large amount of game to appear shortly after the machine becomes available in quantity.

And the price for this massive memory built-in micro drives 16 bit machine? The same as a 89C model 8 at £399.

It is available only through mail order at the moment. Phone Sinclair on (0276) 886100 for more details.

# G·A·M·E·S N·E·W·S

## WORLD DOMINATION RULES DK!

### DICTATOR

Do you lust for ultimate power? Is world domination your greatest wish? Dictator, a new game for the 48K Spectrum places you in the shoes of some of this century's most infamous figures.

Can you make the memories of past dictators pale in comparison to your horrific exploits? Can you make a monkey out of Mussolini or make Stalin look like a school boy?

Dictator lets you swoop to the most barbaric empires. No strategy is too great for your warped brain. You must crush your own countrymen under your heel and organise and direct the activities of the secret police, crushing rebellion and rounding up dissidents.

Once you have enslaved your country and killed or imprisoned all your enemies, your attentions must turn to neighbouring countries. You must stop at nothing, not even terrorism or outright war to secure victory — the only road to complete world domination.

Dictator is available from DK Tricorders for the Spectrum computer or the BBC model B costing £5.95.

## ECDNDMIC GLDDM AND DDDM

1984

It had to happen — a game entitled 1984, the year made famous in George Orwell's book of the same name which predicted a gloomy future with dictators ruling the world.

Although it has nothing to do with Orwell's book, Incentive Software have picked an equally

gloomy theme for their 1984 game — the British economy.

You are the head of state having inherited the balance of payments and economic figures for 1982-83. It's now up to you to straighten out the economy and attempt to ride out three terms of office to take Britain into the 21st century. Unemployment and inflation are problems you will have to tackle head on with the aid of graphic displays.

Also new from Incentive software is the first in a trilogy of adventure games called the Mountains of Ket. Part II of the trilogy will be released in early 1984 with the concluding tape due out next summer. The first person to solve the adventure will win a video recorder up to the value of £400.

1984 and Mountains of Ket run on a 48K Spectrum and are in the shops now at £5.50.

## CHILLY TIME FOR SLEEPING BEAUTY!

### SUSPENDED

Suspended, a new adventure game from Ludlum, will send a chill down any adventurer's spine.

The game is set in Earth's distant future. You are at the centre of a massive computer complex, buried miles under ground and your body has been held in suspended animation for decades! Subconsciously you control the working of an entirely automated planet, through a computer wired to your frozen body.

They said you would not wake for over 500 years, boring the most dire emergency, of course! Woken from your age-long slumber, however, by the main computer's warning systems you find a strange force acting on the planet's machinery.

With the help of six thought-operated

androids through which you receive information and whose movements and actions you control by telepathic messages, you must search the underground complex in search of this mysterious presence.

Suspended — a cryogenic nightmare is available from Pete and Pom computers for any Apple computer with disc drives for £30.95.

## SET YOUR SIGHTS ON THAT CASTLE!

### CROSSBOW

Ready! Aim! Fowl! And another culture hits the dust! You'll need a quick trigger finger and rock steady aim if you're to protect a party of travellers from a whole myriad of nasties as they continue in their search for the mysterious castle.

The travellers, a Robin Hood-

like character, his female companion and a dwarf, all carry weapons of their own but unfortunately don't use them. It's up to you to ensure they survive to the end of their quest.

To determine the path of your journey, you must first aim and fire at one of three coloured squares played below a graphical map of the area. This colour will determine the path, which is chosen at random, that the travellers must follow between two points on the map.

The journey begins — it could be through ice caverns, deserts, ghost towns, volcanoes and a jungle to name but a few, before you reach your final goal, the Castle. As you travel, enemies attack you — and you must use your crossbow to protect yourself.

Sighting down your crossbow, it's not as easy as it first appears to hit the fast moving targets which include vultures, witches, scorpions, flaming thunderbolts and abominable snowmen, who converge on the travellers with appalling regularity.

Some scenarios are more difficult than others and the number of points awarded depend on which scene you are currently traversing. If all three of the party die on route to the Castle, the game ends.

The graphics are excellent as are the sound effects. In true mecha fashion, the man mauls grunts and shouts OW! whenever he's hit or bitten, but the girl lets out a truly bloodcurdling scream!

You'll soon learn which coloured paths lead to which scenario as you play the game which allows some choice in determining the terrain you want to travel over.

However, there is an element of risk as you may find yourself traversing the same ground two or three times in the same game. Ideally you want to cover each scene once to find the castle.

Crossbow, by Eady, incorporates an element of skill and is well worth playing if you want to try a different shoot-'em-up.

## R·E·V·I·E·W·S

GAME OF

SKI-ING  
IN THE  
PYRAMIDS?

## MUTANT CAMELS

It's not often that C&VG praises the people behind the games we review. In this case, I can't help but mention Jeff Minter's refreshing originality, his extraordinary imagination and obvious and abundant programming skills which have produced the best Commodore 64 game to date, *The Revenge of the Mutant Camels*.

*Revenge of the Mutant Camels* is a follow up to Llamasoft's *Attack of the Mutant Camels*, but the rôles have been reversed and you have now become a laser-splitting camel who must fight through an incredible 42 different attack waves.

The game is played against a scrolling backdrop of Egyptian pyramids and ultra modern cities. The camel can spit laser fire in any of eight directions, kneel down, or jump in the most ungainly fashion I have ever seen. It would be totally impossible to describe every detail or idea contained in this game, but I'll give you a brief summary.

Among the 42 levels are skiing kangaroos, teapots, winking pyramids, exploding sheep and baby camels not to mention

FALCON PATROL

DIABLO

DEMON ATTACK

MUTANT CAMELS

PI-EYED

RIVER RAID

flying cigarettes and toilet seats.

Not only does each wave have its own individual characters, but they all have their own unique attack pattern. Unlike other multi-level games, once you have got past one level you have no guarantee that you'll get past the next time, because each level has a certain random feature which makes them unpredictable.

Revenge of the Mutant Camels contains the best graphics and animation I have seen on the Commodore. It's a compulsively playable and addictive game and very funny to boot.

This game can only strengthen Imago's claim as the leading independent Commodore software company in Britain. If you're looking for a good piece of software for your '64, then look no further. Revenge of the Mutant Camels will keep you occupied for hours. I guarantee

## SHOWDOWN WITH THE SHADOW

Nur satisfied with exporting every detective movie and TV programme they have ever made to Britain, the Americans are now trying to convert us to Shamus and Hutch on computer.

Shamus, a new game for the Commodore 64, is based loosely on the arcade hit *Seizak*. Shamus may seem a strange title to give a game until you discover that it's American slang for a private investigator.

Shamus' latest case is the most difficult and dangerous assignment of his career. He must track down the 21st century most infamous criminal, The Shadow, to the heart of his underground lair. Shamus must battle his way through a maze of rooms filled with his adversary's henchmen on his way to the final confrontation with The Shadow.

The object of the game is to reach the Shadow's throne room buried deep in his castle stronghold. There are four levels, each consisting of 32 different rooms. To move onto the next level, you must help Shamus explore every room and collect the correct key to unlock the gateway to the next level.

Each location is populated with three different types of mutant guards, whirling drones, robo-droids and snep-jumpers. Each type has varying degrees of intelligence — the ability to locate Shamus and follow him — and speed, but all are deadly to our private eye. When you enter a new room, you'll have to have all your wits about you and quick reflexes too or you'll end up in very hot water.

Spending too long in one room can prove damaging to Shamus' health as The Shadow is waiting in the wings ready to leap out at the unsuspecting detective. Shamus cannot kill him in this situation, only stun him momentarily to make good his escape.

The game provides four levels of difficulty. I'm afraid even the first level taxed this reviewer's gnarled joystick fingers. Further levels get progressively more difficult until they reach what I call the impossible level.

Shamus is produced by Synapse Software for the Atari computer. The game is imported into Britain by Centresoft and retails at £25.95.

## SOLITARY DEFENDER OF THE FUEL

### FALCON PATROL

Watch out skipper! Bandits at 10 o'clock! The enemy jet zapped past me firing its machine guns. I got on its tail and fired an anti-air missile — the enemy jet was doomed.

Another successful mission for the sole survivor of Falcon Patrol — lone defender of all installations and airbases! Falcon Patrol is a new game from the vast Virgin Games range for the Commodore 64.

You plot a virtuous take off and landing jet — and the enemy are attacking in waves, bombing and machine gunning as they go. Your job is to defend the oil installations and airbases. The bases are vital to your survival as you must land on them to refuel and re-arm your jet during the conflict.

The graphics are extremely good — your jet takes off and flies in a most convincing manner. And the way you can bank and turn your jet is simply delightful.

On the ground you see complicated oil installations, roads, buildings and vehicles in 3D style graphics.

Game action is quite fast — helped by a radar readout at the bottom of the screen. There's a high score and present score readout too, plus a fuel gauge and ammunition status display. You simply have to blast the enemy planes out of the sky — avoiding their bombs and bullets.

The enemy jets also bomb your airbases — so make sure you know where you can find an undamaged base when your fuel alarm begins to sound. You must land and refuel before the mission can continue.

But even on the ground you are not safe — the enemy jets attack you here too. You get an extra life when you reach 3000 points which will take a little practice.

There is a nice arcade style Hall of Fame to enter top scores and the name of the person who scored them included at the end of each game.

You'll need a joystick to play this all action arcade-style game on your 64. A nice addition to the growing range of software for this computer, Falcon Patrol is available from Virgin Games stockists at around the £5 mark.

## DEMONS HAVE BEEN CONVERTED

### DEMON ATTACK

You have fought them in the arcades. You have fought them on the Atari VCS. Now you can fight them on your Vic.

Imagic has now released its award-winning Demon Attack game for the Vic 20 and, unlike most Vic software, it's on cartridge so it will run on a 35k machine.

Comparing this game to the Atari VCS version as people will probably do, I actually prefer the Vic one.

In case you've been locked in the loop for the past two years you won't know that Demon Attack is a shoot-'em-up which originated in the arcades. Each wave has only about half a dozen aliens which appear almost simultaneously. They move much faster than space invaders, and travel anywhere on the screen. Each wave is slightly harder than the one before and later ones have aliens which split into two parts on the first hit. The total number of waves is enormous.

The graphics are as good as the Atari version, and movement is very smooth. The way the larger aliens are formed by swooping from both sides of the screen is very impressive. This version is also slightly easier than I expected.

Control is via a joystick, and sound is also put to good use, showing the machine to its full advantage. Overall a great version of a classic game.

Demon Attack from Imagic comes on cartridge for the Vic and costs £32.50.

## BLASTERMIND

At first glance this might seem to be just another version of a very popular game. How wrong can you be!! True the start is simple enough. The Spectrum picks a code of numbers or colours with a selection of levels of difficulty — and invites you to do the same. You then take it in turns to guess each others code from the clue supplied after each guess. An extremely well written, fast and very clearly displayed game, with almost inevitable defeat.

This was exactly as intended but unfortunately something went wrong. During the programming strange uncomplementary messages began to appear on the screen. At first they were so few they were not taken too seriously but soon they could no longer be ignored. Somehow the Spectrum had been given a personality — a rather dev-  
ious supercilious dislikeable, hateful horrible mind.

\* Side B contains a version of the game compatible with the excellent Cuihua uSpeech mid — even worse!! \*

SPECTRUM 48k £5.95

## THE QUEST OF MERRAVID

VIC 20 (16k) £7.95  
or Commodore 64 £7.95

A really challenging and enjoyable adventure written by a confirmed adventure addict who grew tired of the ease with which he solved other adventures himself. Will accept and act on sentences containing up to nine words.

The adventurer becomes Merravid charged with the task of finding taking and then returning the magic Fresstone of the Dwarves. However, overcoming the many novel and original hazards is no easy matter. Careful and imaginative thought is required if progress is to be made and the Fresstone tracked down to the lair of the Dragon of Thargon. Even then the Dragon has to be defeated and the stone retrieved. A computer game extremely enjoyable and very user friendly adventure.

## HARRIER ATTACK

Pure machine code super-fast, action-packed highly addictive arcade-style game requiring great skill. The harrier takes off from an aircraft-carrier and has its own airborne defenses to attack enemy installations on a nearby island. The harrier may fly faster, slower, higher or lower and has bombs and cannon fire with which to protect itself and make its own attack. If it flies too high it is detected by enemy jet-fighters (which it may counter attack) — so it needs to hug the mountainous terrain which also varies with every new game. But the island is heavily defended by anti-aircraft rockets and tanks which again the harrier may counter-attack or try to fly through. A tally is kept of fuel, speed, altitude, ammunition, plus player score and high score. Finally the harrier must make its bomb-run over the enemy base before returning past more hostile shipping to its own carrier.

any ORIC - 1 £6.95  
any SPECTRUM £5.95

## SCUBA DIVE

any ORIC - 1 £6.95  
SPECTRUM 48k £5.95

Pure machine code with super cartoon graphics. You are in control of a diver who must swim down through jellyfish, sharks, barracuda and a host of other under-sea nasties to locate the entrance of a submarine cave. He must then follow its twisting and branching passages which change with every new game to locate the magical giant oysters with their fabulous treasure of enormous pearls. Many of the passages lead to dead-ends while some are filled with horrible underwater monsters. Each dive has an oxygen tank and there is enough oxygen left for the return journey, which is further frustrated by the diver's boat shifting anchor and threatening to decapitate him with its propeller. This game which features three divers, player score, high score, hall of fame and sound effects, presents perhaps the ultimate epic arcade adventure.

# DRUNK IN CHARGE OF A PIMAN!

## PLAYED

Well, it hits us all eventually, doesn't it. One day you're a star. The next you're a drunken wreck. Or so Eugene tells me. Seldom has he the Piman hard in this game and, in his acute desperation, he's taken to the bottle.

Your job is not to cure him of his ill ways, as you might think, but actually to help our patient to drink as much beer as he can before running out of points.

Before I actually played the game I listened to the "awful" single record on the other side of the tape. I thought that it might be quite funny, but it wasn't just awful. Ewch, the office patriot, has a lot to answer for!

Anyway, the game itself is set in a "trogger" type street. The poor drunken Piman staggers down the street avoiding the oncoming cars. There are lines of shops, pubs and the like along the street and the Pimen can enter any of them. The first thing that then happens is a message appears on the screen. None is really funny, just silly.

If our hero enters a pub, then he can start drinking the beer. He must empty all the glasses on the table before he can leave.

The pub scene is drawn on screen very well. The view is one looking down from you guessed it above. The whole establishment is visible. There's a pool table, cosy fog line in the corner, the bar itself and even people doing naughty things into a basin! Each pub is different, and they're all very good.

Once the beer's all gone, the Piman can leave the pub and stagger on to another.

This game is silly in the extreme, but just in case you're worried about corrupting delicate young minds, I can assure you that it's all good clean fun and perfectly acceptable.

The bottom of the cassette relay card says to watch out for the Piman's continuing adventures. I wonder what'll come next. Just breathe into this bag please sir? Perhaps? Or some thing even more drastic?

## FLY THIS RIVER OF NO RETURN!

### RIVER RAID

Acquisition, the people best known for their cartridges for home video games centres, have made a brave step into the world of computer software with a conversion of their popular River Raid war game.

If you've not seen the game before, here's a brief rundown of the scenario. You control a jet fighter flying at low level along a river basin — blasting enemy cruisers, helicopters, hot air balloons and jet planes.

You also have to destroy bridges — and the number of these you destroy tells you just how far you are up the river — and how good a pilot you are. Tanks cross the bridges and you can score extra points if you blast a bridge complete with tank. In later stages of the game, tanks shoot at you low flying jet from the riverbanks, while helicopters fire homing missiles.

Early in the game, all the enemy planes, ships and choppers remain static — but they soon start moving back and forth across the river, so you'll have to dodge them or blast them.

Oh, and another thing, the corridors of the river change as you fly along — and some of the narrow ones are really narrow — believe me!

This may be a river of no return — but you still have to reload your jet fighter. You do this by flying over enemy fuel dumps and getting tanked up! When your fuel is running low a nasty alarm signal bleeps from the computer — that's if you haven't already noticed that you are running low from the on-screen fuel gauge.

The graphics are slightly more detailed than the original vcs version — with mountains on the river bank — and it has addition-

el hazards built in, like the hot air balloons and tanks. But it's just as addictive and challenging!

River Raid from Acquisition for the Atari 400/800 and the new 600XL and 1200XL is available now at £29.95 from Atari games stockists.

## TRACKS FOR TEXAS PUZZLERS

### DIABLO

Good Texas games are few and far between. Only a few, including Parsac, have received overwhelming praise.

Texas owners in this country have been starved of high quality software. But a Scottish company — Timeless Software — has come to the rescue with a range of the best games titles available in the USA.

Diablo is a complete change from the usual shoot-'em-ups we're all so used to, and based with?

Diablo displays a screen filled with 232 different tracks and 116 panels which can be moved around the screen like pieces from a Chinese puzzle. A small black ball is continually rolling along the tracks and as soon as it passes over a track it disappears.

The object of the game is keep the ball in play until all the tracks are gone. The game is lost if the ball falls into a blank square or off the play area into the border.

The graphics are quite superb and the best I have ever seen on the Texas computer. Movement of the squares is flicker-free and smooth.

My one criticism of Diablo is that it's a little slow, but that can't be helped on the Texas I suppose.

Diablo is available for the TI 99/4a with an extended basic cartridge from Timeless Software costing £7.95.

## LAST GASP OF FADING INVADERS?

### BIRDS OF PREY

Having already seen a few games on the new Electron, I was looking forward to reviewing a really good one for C&VG but, unfortunately for me, the Editor dropped a copy of Birds of Prey on my desk.

Spurred on by promises of spectacular hi-res graphics and fast and furious action, I ran hot foot to the nearest Electron, threw the leads together and waited in anticipation for what I convinced myself would be a game amongst games.

How wrong I was. To say the game is unoriginal and uninteresting would rate as a compliment.

Birds of Prey is a re-run of that old favourite, Galaxians. But Romik have served up a version that might have been acceptable to game players three or four years ago.

Birds of Prey follows the Galaxian theme in so far as the aliens swoop downwards, but neglects to include variation in the light path. All the alien birds follow predetermined paths which presents no problem or challenge to the would-be player.

Birds of Prey costs £5.99 from Remik Software.

Continued from page 43

Our acting editor is a bit of a pinball freak — and this issue he's persuaded us to take a look at computerised versions of the game for Atari, Dragon and Vic-20. We asked Simon Hood, a member of the Pinball Owners' Association, to take a look at Terminal Software's Pinball Wizard for the Vic so we'd get a pinball player's eye-view of the micro version of his favourite pastime. Over to you Simon...

## DESIGN YOUR OWN PLAYFIELD

### PINBALL

It's been a long time since space invaders first ousted pinball from arcade supremacy and banished it to dark and deserted corners of arcades and pubs the length and breadth of Britain.

A new game for the BBC differs from earlier conversions by leaving the design of the playfield totally up to the player.

The screen is divided into sections, the table itself, and the menu of options along the right hand side. The cursor keys are used to move a cross over the screen, placing rings, bumpers and flippers in just the required position. To construct the playfield, the player just moves the cross onto the selected shape on the menu, presses the space bar and then positions it wherever he desires.

Other options include 'bence', which alters the rebound speed of the ball, 'lip' and 'slip' change the strength of the flippers and the force that can be used while playing. The Z and / keys are used to operate the flippers and the space bar flicks the ball into play — the longer the key is held down, the faster the ball emerges.

Once you have designed your masterpiece of pinball technology, the whole playfield can be

saved onto cassettes, making a library of designs easy to create.

My only criticism of the game is that it doesn't cater for the bone idle computer owner because it hasn't a ready-made pinball built in. The graphics, however, are exceptionally good and very clear. The game's best feature is that it can be as easy or difficult as you like.

BBC Pinball is as professional a piece of software as you are likely to find, and one that would grace any gamer's software collection.

Pinball is available for the BBC model B from Kansas City Systems costing £8.95.

## SEE THAT SILVER BALL GLIDE

### PINBALL

Microdeal have made a brave attempt to bring the thrills of Pinball to the screen of the Dragon 32.

You get three different screens to play with and you can also choose the colour of the playfield at the start of the game.

Unfortunately the playfield graphics are very basic and the game action soon becomes a bit tedious. Both flippers operate together — so you can't do any fancy flipper work. You can catch the ball on the flippers — but it would be a great advantage to be able to use those flippers independently.

You can control the force with which your ball is fired onto the table — and Microdeal have got the bouncing motion of the ball off to a tee. It really is a realistic representation of the way a pinball glides around a playfield.

A few constructive comments. How about making the flippers

smoother when you switch skill levels? And make them operate independently. Also how about including a tilt feature and a 'Ball in Play' indicator?

Pinball for the Dragon 32 is available now from Microdeal and will set you back £8.00. It uses Dragon joystick or keyboard.

● Getting started	6
● Graphics	5
● Playability	6
● Value	6

## PINBALL DESIGNERS WANTED!

### CONSTRUCTION SET

There are very few pinball computer games which allow you to alter the playfield. Even fewer software firms give permission to sell the new version you've created using the program.

Pinball Construction Set from Electronic Arts for the Atari 400/800 infills these functions using a very successful variant of Smalltalk, previously only available on mainframes.

Because the language is graphics-oriented, the layout of the various utensils on the screen has obviously been well thought out and tested.

Every conceivable aspect of the game can be changed. Moving the objects about is slick and by using the paint brush, the shape of the bumpers can be altered. Using the same system, tunnels can be hidden, messages scrawled on, and, if anything is not to your liking, then you can zoom in with the magnifying glass.

When all is to your liking, the time arrives to save your game. This is the last time you will need to use the keyboard.

Another Bill Budge has included working tables of all the present computer pinball parlours such as Night Mission and David's Midnight Magic. All

told this is a truly astonishing leap forward in eight-bit programs and you get all this for £29.99.

Unfortunately it will not work on the new Atari XL range which means owners of these micros will just have to hang on until a conversion arrives.

## WIZARD WITHOUT ANY MAGIC

### PINBALL WIZARD

Pinball Wizard is a video version of pinball for the unexpanded Vic-20. It is distributed by Terminal Software of Manchester at £7.95.

The program takes two minutes to load completely, during which time a title page flashes on to the screen, and finally the game displays itself appears. Very nice it is too, with multicoloured and flicker-free graphics.

The game can only be played from the keyboard by using the 'Commodore' or 'cursor-right' keys to flip and the spacebar to nudge. It really is a poor piece of program design in this day and age, when any program of this kind should run on joysticks to prevent wear and tear on the keyboard.

The flippers are reasonable, in that you can catch and hold balls on them in the way that Terminal's publicity suggests — but it is a bit tricky. All three flippers operate together and cannot be activated separately. The sound is poor, though the graphics impressive.

The documentation supplied with the program, apart from the loading instructions, is adequate.

It would appear that the possibility of a more advanced pinball program — in say, 8k — has been sacrificed on the altar of 'it must fit into the unexpanded Vic at all costs', and an unsatisfactory compromise is the result.

In conclusion, therefore the program is overpriced at £7.95 as it is too limited to hold attention for long. Pinball Wizard for the Vic-20 is distributed by Terminal Software of Manchester.

# IT'S ONLY ROCK N' ROLL, BUT...

## ROCK N' ROLL

K-Tel are well known as the people who bring you those giant compilation LPs full of greatest hits. Now they've moved into the world of computer software with a range of "Donbleside" tapes for the Spectrum.

One of the first features games called *It's Only Rock n' Roll* and *Tomb of Dracula* — both Adventure style games with some graphics thrown in.

In *It's Only Rock n' Roll*, you set out to become a rock superstar — and the road to stardom is a tough one. You have to write songs — with the help of your Spectrum — raise enough money to go on tour or play concerts, make records, hire and fire managers, just like real life. It's like a computerised game of *Monopoly* set in the pop world.

The second half of this "Donbleside" is *Tomb of Dracula*, a standard maze-style Adventure with some amusing graphics thrown in. I found myself getting killed off too quickly, but I think that's more my fault than the way the game is put together!

The documentation for this game is much better and enhances the playability.

All in all, this innovation from K-Tel is pretty good value for money. Two enjoyable games for £6.95 available now from Spectrum games stockists.

# PLEASE SAVE THE WHALE!

## MOBY DICK

If you support the Save the Whale campaign and like playing computer games, then *Moby Dick* will keep you happy for hours!

However, if you like fast addictive original games then I'd give this one a miss. The theme is a fairly old one. Daphn charge the submarines and shoot the helicopters. But there's a twist — if you hit *Moby Dick*, who is swimming in among the subs — you'll be rammed by a large green ship

and sink helplessly to the seabed. You are also supposed to catch the pilots of the helicopters as they parachute down from their doomed craft.

You get five ships per game, and there are three attack waves. In the first, the submarines do not attack, but the choppers drop bombs which you must avoid. In wave two, one sub releases floating mines and in wave three the other submarines release hacking missiles.

I found the game slow, and after a while a bit monotonous. But if you like depth charge games and want one for your new Commodore 64 then I guess you could do worse than this offering from PSS of Coventry. It's available now and costs £7.95.

# POPCORN FOR PENGO

Now there's a game which will certainly leave you with cold feet. Arcade favourite *Pengo* has now been released for the BBC B and, in case you didn't know, the game is set in the frozen North (somewhere near Watford no doubt).

As *Pengo*, you have to kick away the blocks of ice to clear a path, but you're pursued by snobees which can be killed if you kick ice at them. There are also three bonus ice cubes which don't break when you kick them which can be moved around the screen. If you manage to get them in a row, then you score extra points. Once you've killed all the snobees, then you move on to a harder screen.

I found that the best tactic was to kill all but one of the

snobees and then get the bonus blocks. Once you've done this, you can kill the last snobee and move on to the next screen. To help you along, the Beeb plays you a nice catchy tune during the game, which I'm told is called *Popcorn*. Anyway, it gets faster once you've killed an snobee.

Control is via the keyboard although a joystick can also be used. The program uses four keys to control direction, and the return key, to kick a block. It's also pretty fast, too. It took me some time to clear the last level.

The graphics in this game are excellent and everything moves very smoothly. However, if the machine is trying to do some clever calculations, I noticed that the sound becomes a little distorted.

Overall, this must be one of the best arcade adaptations for the Beeb and one of the few programs that makes the most of the micro's features.

You can get your copy from Watford Electronics and it'll cost you £7.75.

# PICK UP A PULSATING PROTON

## LONE RAIDER

For several years now Atari International (UK) has been as active as a rabbit with tiger marts. However, in a small quarter page advert subtly hidden at the back of most computer magazines recently, Atari offered to look at and possibly publish any Atari machine code program. I declined the offer myself — too much like hard work — but now a game has been picked.

The *Lone Raider* is astonishingly good compared to most UK produced games and at £14.99 it is untouchable.

It is supplied in a new form of packaging for Atari, reminiscent of a video cassette box.

Whilst loading, that elusive second cassette track is used to play music rather than these intolerable beeps. As with most newly released games, this title page is very flash with some nice animation, although I felt more deprived by the lack of deep bassy title music blaring forth by kind permission of POKEY.

The game is in three stages. You beam down to the surface of a hostile planet then after blasting your way through a few dalek-like enemies — ducking the odd stray shot and sneaking past The Terminator — I suspect this name was stolen from one of the Worst of Hollywood movies! — you sneak into the factory entrance.

Once in the factory, you are duty bound to burn around the place collecting the stores of nutrients whilst avoiding the nefarious robot guards.

Like *Pacman*, you can kill the robots after eating one of the pulsating blue objects — which I am told are protons. But unlike *Pacman* these power pills move. You weave through doors, duck under protons you'd prefer not to use and must regularly get squeezed to death between the robots.

After much diligent practising however, I passed this screen and after passing a bonus screen get into the transmitter room. Here you theoretically dodge some evil looking bouncers to reach the transmitter.

Overall it is a very smooth game and strangely addictive. For the budget buyer and collector alike, I strongly recommend *Lone Raider*. It runs in 16k on both the new and old ranges of Atari machines.

# ARCADE

## FUN PALACES OF THE FUTURE

Back in November we asked you for your ideas on arcades of the future — how they could be transformed from the rather seedy establishments found in towns and cities today into gleaming fun palaces of the future. Well architect Richard Porch has answered our plea — and now here is his very individual view of the shape of arcades to come...

"Imagine walking down your high street on your way to your local arcade. When you get there, you find that the normal ordinary looking shopfront has been replaced by something that looks like Battleship Galactica! Instead of a roof there is a vast glass dome full of gleaming pipework and steel masts.

You walk into this strange structure — and the first thing you notice is the everell gloom, pierced only by the strobing flicker of dozens of video game screens. Ceilings and walls are gone and in their place are spacelike grids. Within these grids are screens advertising software, and the latest films. Why can't all arcades be like this?

Meanwhile back in the real world — don't you wish, as you come to the bottom of the cash box, that the arcade in which you are playing looked less like a carpet warehouse and more like something from the 21st century? A place where you could not only play all the latest games but also purchase software for your computer and maybe grab a burger or two?

Arcades based on a theme could hang in modular clusters around a central service mast which carried all the necessary power cables and other services.

Inside these modules it would be like wandering around inside a printed circuit. Banks of arcade game screens would line the walls as robot dispensers whirled around dealing out soft

drinks and burgers on request. There could even be other computers on line apart from the games playing arcade version machines. These could be set aside to form an electronic "school" which would help with exam preparation or even just homework!

To take such an "arcade tower" to its logical conclusion you could also add accommodation modules. Such leisure capsule towers already exist in Japan — so if arcade modules were developed, you could soon be enjoying a holiday in the first residential games players' motel!

To fully extend this idea, however, you'd obviously need the mega bucks that only big computer companies could provide. This could enable you to develop another idea too. How about leasing a North Sea semi-submersible rig and convert it to an offshore games players' paradise. If you built a dome over the deck space, you could house an entire community of gamers at sea! Such oil rigs can move under their own speed power so in theory you could play arcade games anywhere in the world. With accommodation, restaurants and game arcades on board, maybe you could enjoy games playing cruises.

Once you start, it won't be like playing a game; it will be more like being at the controls of some vast machine — the game flashes into action and you're off into a new world!

## VANQUISH THE VAXXIAN EMPIRE

### MAJOR HAVOC

With a time bomb in your pocket, you set off to sabotage the Vaxxian Empire's space stations. There's only one worry — can you escape before your mine detonates?

You take the part of Major Havoc whose ancestors have been overcome by the evil Vaxxian Empire. Your mission — to free your people from the enemy's clutches.

Sounds like Star Wars? Well, it's not. Although the original idea may well have come from that epic film.

Taking off, you set course for the first of your targets, snuffed millions of light years away. On arrival, you're immediately pitched into the fray as you battle for supremacy with the Fish Robots guardians of the Empire. Not very fish-like in appearance, but they do a great job in keeping out invaders!

Your skills as a pilot will then be called to the fore as you attempt to dock your craft on the station's landing platform.

Clutching the bomb, you dive into the station and follow the arrows which lead you to the core of the reactor. Down miles

of twisting corridors you race, towards the core — bobby traps and hazards lurk round almost every corner — one false step will lead to instant death.

You've got the use of a limited number of shields which will protect you from death at the moment of impact. Use them sparingly, you never know what's lying around the next corner!

Oxygen capsules are vital to your survival and must be picked up en route to the core. Once there, the bomb's timing mechanism is activated.

A very playable game, Major Havoc by Atari was launched in the States a few months ago and has just made its first appearance in the UK. Look out for it in your local arcade.

# ACTION

## NOT SO ACTIVE ATHLETICS!

### TRACK AND FIELD

You'd better hurry up and get your index finger into training if you want to break a few athletic world records!

There are six championship events for you to try your hand at in Track & Field from Konami. You have the choice of two track and four field events and in each one there's a record to collect if you've got the stamina!

"On your marks, get set, GO!" and you're off down the track in the grueling 100m hurdles. Using the 'run' button to increase your speed and the 'jump' button to leap the hurdles, you streak down the track and cross the finishing line. The crowd leaps to their feet cheering, but subsides in disappointment as it's announced that you've narrowly missed the world record.

However, don't get despondent — with the choice of the

100m dash and four field events, comprising the long and high jump and the hammer and javelin throws, you've plenty of chances to beat those elusive records. In the field events you also

'run' button to run up to the throwing line and then, thumbs on the 'jump' button, gauge the distance and throw — the longer the throwing button is depressed, the farther and higher you, the javelin or hammer will travel.

The 100m dash can be played either against the machine or against three other players using the four 'run' buttons to increase your speed.

Should you manage to win and break the current record, you'll receive the fanfare of a lifetime — with the theme tune from Charots of Fire ringing in your ears, you will be escorted to the rostrum and presented with a medal by a pretty girl. A fitting end to a hard won race!

Arcade athletes will love Track & Field — you can now play a full day's sport with no more discomfort to yourself than a cramped finger!

Who would have thought that "Noughts and Crosses" would be used as a theme for a pinball? Well Bally did — and they've just released a pin called X's and O's based on that age-old game.

Located inside the playfield is a video style noughts and crosses board. The X's and O's are lit up by hitting various targets. Light up the entire board and one letter in the word Tic Tac Toe — the American name for noughts and crosses — will light up in the back-glass. Light up the whole word and you score two replay!

The playfield itself is fairly conventional with a group of three bumper bumpers at the top, some interesting lane change features plus one of Bally's 'saucers' — those little gizmos which trap the ball then catapult it back into play. It's a fairly conventional machine but is well worth taking a look at if you spot one in your local arcade. Up to four players can compete in this elaborate version of noughts and crosses by the way.

Next issue we hope to bring you news of the latest developments on the pinball scene after C&VG's visit to the big arcade show in Blackpool. This show regularly features all that's new in the arcade world and all the top arcade names will be showing their brand new offerings.

So if you are a pinball player, watch this space for the shape of pins to come!

Meanwhile, elsewhere in this issue we've taken a look at pinball converted to computers. Simon Hood of the Pinball Owners' Association takes a look at a version of video pinball for the Vic 20, and you'll also find reviews of versions of the game for the Atari 400/800 and the Dragon. Do they match up to the real thing? Turn to our reviews section to find out.

## ROUT OF THE ROBONIDS

### MARVIN'S MAZE

Wait a minute... I thought, "What's O'Bert doing in a game that resembles a 3D Pacman with robots?"

Marvin's Maze, one of the latest offerings from SNK Electronics is a Pacman-based game with a difference. Incorporating a 3D maze on two levels, four connecting lifts, manic Robonoids and a cute, cuddly O'Bert-like character — it's a unique variation of one of the early arcade success stories — except you don't use a joystick. Marvin is controlled using a track ball.

In the usual Pacman fashion, you have to guide Marvin round the maze to pick up power pills that are littering the pathways.

The robots seem to have some form of ESP and converge on him from all four corners in gangs.

Marvin can either escape by dashing up or down to the next level, via the lift, or swallow a fiery pill which turns him red — now he's ready for action and can deal out the same treatment to the chasing robots!

The Robonoids can't follow Marvin from one maze to another, but there is always another set ready and waiting for him when he swaps levels.

Once both levels have been cleared of pills, he can move onto the next where the pace heats up and it becomes harder to avoid the nasties and eat up all the pills.

Watch out for paths that are dead ends — you'll soon be caught out and trapped by those beady-eyed monsters.

Marvin's Maze won't set the adrenalin coursing through your veins, but it's instantly likeable and very playable. Full marks to SNK Electronics for rejuvenating an old idea into something

other than the average Pacman spin-offs.

## THE SEARCH IS ON FOR THE C&VG 1984 ARCADE CHAMPION!

Have you rescued the Princess in Dragon's Lair? Or have you come first in the Pole Position Grand Prix? If so you are prime candidates for our 1984 Arcade Championship title.

Your first move will be to fill out the coupon on our Next Month page and mail it to us. All we ask you to do is to take the form along to your local arcade, pub or the place where your favourite arcade machine lurks, get that high score and get the publican or arcade owner to witness it for you.

You can aim for a high score on up to three different machines. Your chances of reaching our grand final in the summer are increased if you enter on more than one machine. There will be a grand prize for the overall champion plus runners-up prizes too. So don't forget — get next month's Computer and Video Games and begin your quest to become King — or Queen — of the arcades!

# WIRE

## CARTOONS FOR THE DRAGON'S LAIR FROM COLECOVISION

The hot new laser game — Dragon's Lair — has been licensed by Colecovision for conversion to their home video games system.

The laser disk game which introduced the new super hero, Dirk the Daring, has caused a storm in the arcades that have so far installed it.

The super detailed cartoon animation makes computer graphics obsolete, as you control

Dirk on his swashbuckling adventure to rescue the beautiful princess held captive by the keeper of the castle.

The quest takes you through 38 booby trapped rooms, each with its own unique hazards and challenges. But what's really special about Dragon's Lair is the cartoon animation drawn by ex-Walt Disney man, Don Bluth.

When the Colecovision version appears in "mid 1984", Col-

eco have promised to bring out all the necessary hardware to make the game work.

This is likely to be some sort of home laser disk add-on for the Colecovision. As Coleco now have the rights to Space Ace, they seem to be concentrating their new arcade game licensing firmly in the area of laser disk games. Which all adds up to one thing — laser disk games on your Colecovision.

cational or entertainment value but cannot be classified as a game.

Apart from the prizes and advances paid, the winning authors will receive 10 per cent of all income from their programs.

Organisers of the awards say that the Video Game of the Year will become an annual event and have planned the next two award events for Cannes and Los Angeles.

Further information about the Video Game of the Year awards can be obtained from Mark Eket, Video Games International Ltd, Pinewood Studios, Iwer Heath, Buckinghamshire.

## 10,000 DOLLARS UP FOR GRABS!

Massive cash prizes are up for grabs in a prestigious new competition — The International Video Game of the Year.

The competition, which is being launched simultaneously in 20 countries, is being sponsored by Video Games International Ltd, and carries a hefty \$100,000 advance against worldwide royalties for the winning game, plus five further advances of \$15,000 for winners in other categories.

The competition is expected to attract entries from the thousands of video games programmers and computer buffs around the world. The aim is "to

discover new games which represent a breakthrough in basic creative and commercial flair," say the organisers. What they want to find is the new Space Invaders or Pac Men. But are they too late now that laser discs are invading the arcades?

The winners will be announced at the end of this year at a special ceremony in London which will be filmed for worldwide TV distribution.

The competition is divided into six categories, Sport, Simulators, Arcade, Strategy, Adventure/Fantasy, Special. The Special award will go to the best program which proves the best edu-

## HERE ARE THE LUCKY WINNERS . . .

Many of you sharp-eyed gamers fans had no difficulty naming the games in our January Colecovision competition.

We printed four screen shots of games from the Colecovision range and asked you questions about each one.

Question one was the hardest. It showed the Space Warp screen from the game Gorf.

But you didn't need to be Professor Video to tell us that

Sega are the manufacturers of the arcade version of Zaxxon.

Kong lens sailed through questions three and four to tell us that picture number three is screen two of Donkey Kong, and that screen number four is the follow-up game to Kong — entitled Donkey Kong Junior.

The first three correct entries out of the C&VG memory bin were Chris Hall of Stone, in Shropshire, Andrew Taylor of Dud-

ley, West Midlands, and D Chung of Mansfield in Nottinghamshire.

The lucky two will each receive a Colecovision video games console and Turbo driving module and cartridge — the Coleco system comes with the excellent Donkey Kong cartridge.

Watch out for more names the games competitions and remember the biggest and best prizes are always in C&VG.

## CHANGE OF IMAGE FOR IMAGIC

Imagic — the company behind the hit VCS game Demon Attack — have announced that they will no longer be marketing games under the company name.

Instead, Imagic will become a design software house selling their games to other companies in the video games business.

Imagic were dealt a body blow last month when their top designer — Rob Fulep — he of Demon Attack fame — announced he would be leaving the company.

The Imagic developments have followed a very shaky few months for the major American video games companies.

As profits tumbled and games sales remained stagnant, at least one company, Tallys, said they would be withdrawing from the market.

Even the market leaders — Activision — reported a million dollar loss in their third quarter of trading on video games sales.

TOP TEN	
1	Battlezone Atari
2	Pole Position Atari
3	Donkey Kong CBS
4	River Raid Activision
5	Dig Dug Atari
6	Popeye Parker Bros
7	Tutankham Parker Bros
8	Galaxians Atari
9	Moon Patrol Atari
10	Beam Rider Activision

## GYRATE WITH THE GYRUSS

Terto's new arcade hit GyruSS is about to emerge from the Parker Brothers' stable converted for the Atari VCS and the Colecovision.

Many of you will remember GyruSS as the Mystery Machine that was launched at the 1983 Computer and Video Games Arcade Player of the Year championships.

The super fast shoot-'em-up with the spinning aliens adds a completely new dimension to videogaming.

You control a craft that spins through 360 degrees around a black hole. The aliens are coming at you relentlessly from the black void.

Speed on the fire button and quick directional spins are required to chalk up the mega score in GyruSS. The spinning effect almost makes you dizzy as you blast the enemy.

Also in the pipeline from Parker's arcade — cloning plant — Atari's Star Wars game. This version of Star Wars puts you at the controls of the Millennium Falcon hurtling down the tunnel of the Death Star with Darth Vader at your tail.

The games are having the finishing touches added at the moment and are expected in the shops in May — for Atari VCS and ColecoVision.

Climb the ladders (again!)

# KONG IS STILL KING OF ARCADE CONVERSIONS!

Hello again! I hope you are finding my tips on video gaming useful in getting those scores that impress your friends! This time I've decided to look at another classic video game to come in from the arcade — Donkey Kong.

That giant gorilla has inspired a thousand imitators and is still a best selling game around the wide video playing world. The version I'm looking at here is for the ColecoVision system — one of the most faithful copies of the original. But the tips will apply to most other home video versions of this classic climbing game.

Coleco give away the Donkey Kong cartridge with their system — so many of you might just have found one in your Christmas stocking! Anyway here we go with those hints and tips.

The Coleco version features three of the original arcade Kong's four screens. These are the Ramp screen, Rivet screen and Elevator screen. Each poses their own particular challenge to the player.

The game kicks off with the Ramp screen. Kong stands at the top gnawing Mario's beautiful girlfriend — and throwing barrels down the ramps to prevent little Mario grabbing his girl back from the arms of the great hairy ape. Don't you feel for the poor little chap? Sorry! Back to the game.

The aim in the first screen is to get to the top of the ramps as quickly as possible, by climbing the first complete ladder you come to on each level.

You can hide up the ladders while barrels make up their minds which way they are going to roll.

The key part of this screen is the final run up to the ape's girder. You have to time your flying jump over the last barrel before climbing to Kong's level with great care — otherwise Mario has gone all that way for

nothing! And the only advice I can give you here is to practise which — as we all know — makes perfect video game players!

Then comes the Rivet screen. Here you have to grab all the rivets as quickly as possible — only grabbing the objects which appear for bonus points if they happen to be in the path of your game pattern.

Remember your bonus point timer is ticking away at the top of the screen and the extra points you pick up by grabbing a prize might not make up for the time bonus you've lost.

I advise attempting to move to

the right hand side of the screen — picking off the rivets and trapping the deadly fireball at the same time. If can't follow you once you've created a gap in the girders. Then rush back to the left hand side of the screen and clean up the rivets there — picking up the bonus umbrella as you do so.

Once you've removed the sixth rivet, the Elevator screen flashes up before your eyes.

This is probably the most challenging screen of the game — with these moving lifts adding a hazard or two in Mario's quest to rescue his girlfriend.

Starting on the left hand side

of the screen, hop up onto the up elevator and jump right to the suspended girder section — where a fireball lurks. You can feel the fireball by dodging up and down the ladders giving you more time to make it to the down elevator in the centre of the screen.

Going down! Jump off into the jumble of girders and gaps on the right hand side of the screen and quickly leap up to the girder section below the ape's level — avoiding the fireball in the top right hand corner of the screen.

Another fireball guards the ape's girder. But again you can fool it by dodging up and down on your ladder. This gives you time to nip up onto Kong's girder — and up to the girder where Mario's girl stands waiting.

Professor Video reckons speed is essential in defeating Kong! But maybe you know better? Remember I want to hear from you if you've got any hints or tips on playing home video games. More helpful hints next issue. Bye for now!

Pick off the rivets and then it's on to the Elevator screen.

# VIDEO

## RIDE THOSE WILD BEAMS!

Activision consistently manage to bring out good games — and their latest for the Intellivision called *Beamrider* is no exception.

Activision have managed to breathe new life into the space shoot-out theme with this fast and addictive addition to their range of games for the Mattel system.

The game begins with your spaceship within the hangar deck of a vast spacecraft. Press the game action button and the hangar doors open to reveal a scrolling grid. Your ship launches into space and soon enemy saucers appear on the horizon racing toward you and then dodging away after dropping cloudy photon bombs.

Take a look at the top of the screen where the battle computer readout gives you the number of alien craft in that sector. Blast them with your laser laser belts and then watch for the Sector Sentinel which cruises across the top of the grid — only one of your three torpedoes can destroy it so take careful aim along the

grid and blast it for a bonus score.

The Sentinel is protected by green blocker craft so you'll have to dodge around these to get in the laser shot.

Then you're off into the next sector with more sinister aliens to defeat!

A new danger is added in each new sector you reach — up to sector 14. Some you can blast with your laser, some can only be destroyed using your torpedoes — you only get three per sector — and some can only be dodged.

Occasionally yellow rejuvenators will float through the grid matrix — if you manage to catch one with your craft, you'll win a

bonus ship to help you progress through the sectors. You get the regulation three lives to start with — but you're going to need all the extra lives you can get in later stages where game action starts to speed up.

*Beamrider* is a nicely presented game with good graphics — but I've got one gripe. I would've liked to be able to move the spacecraft up the grid as well instead of just moving it left and right.

A nice touch is that you can play the game with up to four people — another original Activision innovation.

There is also a "drop out" facility, so if one player has to go away for tea or something, the Intellivision automatically omits the player and adjusts the game accordingly — neat eh? You can also freeze the action at any time during the game.

*Beamrider* from Activision will set you back £25.95 and is available from Intellivision dealers now.

### THE VERDICT

A great addition to the Intellivision game catalogue. Very addictive!

## BUBBLING UNDER!

At least an original game theme! I must admit to becoming a bit jaded with the usual video game fare of shooting aliens, dodging ghosts or blasting tanks. OK — so I'm probably generalising a lot. But I imagine's latest for the Atari VCS slinks me with its originality.

Here's the general idea of the game. An evil undersea race, the Titans, have imprisoned Neptune's daughter, the beautiful mermaid Neptuna.

You take the part of Proteus, a member of Neptune's watery royal court, and set off to rescue Neptuna from the underwater cage the Titans have built as a mermaid trap!

Proteus takes the form of a dolphin to avoid the attentions of the Titans — but he can also change into a seagull to pounce the skies above the oceans.

The aim of the game is to help Proteus find the three pieces of Neptune's missing Trident — as only this can free Neptuna from

FATHOM

BEAM RIDER

DIG-DUG

SPECTRON

# CAZING

## In the Titan's cage

The keys to finding the bits of the Trident are magical starfish in the sea and stars in the sky. To discover these, Proteus the dolphin must touch seahorses in the sea and, when disguised as a seagull, Proteus must touch pink clouds in the sky.

Tonch enough seahorses or clouds and the magical stars and starfish are revealed. Tonch the stars and starfish and Proteus gets one of the missing bits of the Trident.

But there are enemies in the sea and sky — nasty octopi and intelligent bits of seaweed hinder the Proteus search underwater, while blackbuds patrol the skies.

Once you've managed to get the Trident and rescue Neptune's daughter, you move onto another level, which opens up new horizons. Your seagull has to fly further to get those all important stars and the dolphin has to dive deeper to get the starfish and seahorses. All the time you have to keep an eye on your energy level. Touching seahorses and clouds keeps your energy high — but hitting an octopus, seaweed blackbud or black cloud drains your energy.

Fathom is a game of strategy and action. You need to work out the best time to transform from bird to dolphin and vice-versa, where to find the starfish and stars, and how to keep that energy level high enough to keep going.

The graphics must be among the best around for the VCS — although the sound effects are a bit limited.

The game is well presented with an informative instruction booklet which includes tips on how to survive the first level of the game — invaluable for a beginner attempting to get into the game for the first time. You do have to read the instructions carefully to get the most out of the game.

This booklet promises a special surprise if you manage to free the mermaid Neptune seven times. I can't wait!

Fathom is available now from

Imagic and can be found at all Atari video games stockists at £29.95

### THE VERDICT

If you fancy a change from the regular offerings — check Fathom out. We think it will keep you amused for some time!

## YOU'LL REALLY DIG THIS!

Dig Dug was a really popular arcade game — and now Atari have converted it for the VCS. It's going to be just as popular among home video gamers! Atari's latest release for their 2600 system brings all the thrills of the arcade game into your front room.

Personally I've always felt that the man who invented a game which involves sticking an airline into a defenceless creature and then blowing it up until it explodes was a prime case for the League Against Cruelty to Aliens — but whatever turns you on, I suppose!

For those of you who haven't seen Dig Dug in your local arcade, here's the general idea. You take the part of Dig Dug, a super-gardener who burrows underneath his vegetable patch to stop the nasty meemies getting to the surface and eating his prize veggies.

These meemies are the bee-lonk-like Pookas and a sort of mini-dragon creation called Fygars. Fygars can breathe fire and are an added underground hazard.

You guide Dig Dug through the earth beneath his garden chasing the meemies — which can be found in underground caverns. The meemies also have the ability to transform themselves into ghost-like forms, moving at will through the earth and ganging up to chase poor old Dig Dug.

Dig is armed with an airpump with which he can either just stomp or destroy the meemies by blowing them up until they explode. Naah!

He can also lead the meemies under strategically placed rocks. Once he's dug a tunnel under

them, they fall — crashing what ever is stupid enough to stand underneath it. Dig included it! he's not quick enough.

This VCS version of the game includes a beginners' level which gives new players a chance to get to grips with the game before braving the dangers of the game proper.

You earn points for the number of meemies you kill off and for how much earth you dig in your underground adventures. Once you've cleared one screen of meemies, you move onto the next with more of the nasty little creatures to deal with.

You get four lives to start with — and lose them if you get caught by a meemie or crushed by one of your own rocks. You can earn bonus points by picking up the fruits which appear, Pac-Man-style, in the centre of the screen.

Dig Dug is going to prove popular with maze game fans everywhere. It's available now at a rather pricey £29.95. Oh yes, there's also a nice arcade-style opening intro screen too!

### THE VERDICT

A good version of the arcade classic with good graphics.

- Theme ▲▲▲▲

## INVADERS MAKE A COMEBACK

"Oh, no! It's Trevolt!" But instead of retreating in horror up the screen, they continue to march down in waves, on and on. Sounds familiar, doesn't it?

Many years ago there was once a game called Space Invaders which changed the course of civilisation. People went mad. Those little green nasties became an international craze and even put an end to conversation in pubs all over this country.

But that was a long time ago, so why have Spectravideo cloned this age-old idea when they could have produced some thing really new and innovative? Admittedly, they have included some new details, but is this enough we ask ourselves?

Not content with little green meemies slowly working their way down towards death and destruction, Spectravideo have incorporated some beautiful graphics into the game — and at least the meemies are orange and blue and no longer green!

The game is set against the backdrop of a space city with your laser base in the foreground. The nasties make their way down the screen in the traditional method, showering you with dozens of bombs, each one guaranteed to break through the city's defence shields or blast you to smithereens.

You'll notice an addition to the game: level four — this is when it stops being a game and war is waged in deadly earnest. There are two types of aliens, the fairly innocuous Hobbits and the more evil minded Sinkers.

The Hobbits behave in the usual manner, but the Sinkers uncharacteristically jump out of formation and weave and dart all over the place laying whole strings of bombs as they go. They are the ones to watch, if you want to avoid death.

If you don't manage to catch them before they reach ground level, they'll dart into the tunnel where your laser base is situated and lay a mine. Once nine mines have been laid — BOOM! — the city blows up and unfortunately you with it!

Your laser base has limited up and down movement in the tunnel and you'll need to make full use of this facility to dodge the aliens as they come crawling down the tunnel towards you.

The watchtowers on the outer edges of the city will start to flash when you are down to less than three laser bases — a good indication that you're nearing the end of the game.

The pretty graphics aside, Spectravideo's Spectron is really nothing to shout about and priced at around £30 it isn't quite up to the high standard of software ColecoVision owners are used to.

### THE VERDICT

Nice graphics, but the game lacks originality.

## OUR HALL OF FAME GAMES

### PLANETOIDS

Acornsoft's brilliant version of Defender for the BBC. At Acornsoft Neil Raine holds the top score of 408,000 — beat that!

### MINED OUT

Quicksilver's highly rated game for the Dragon 32.

### ARCADIA

One of the best selling games around from Imagine. You can enter on the Spectrum or Vic versions — but don't forget to tell us which?

### JET-PAC

The game that made Ultimate a top name in the world of games software overnight and which is rapidly becoming a cult game. For the Spectrum and Vic

### DIAMONO

English Software have high hopes for this mining game and are even offering a diamond as a prize! For the Atari owner.

### KRAZY KONG

The best version of Donkey Kong we've seen for the Vic. From Anilog.

### THE PYRAMID

The Pyramid has Fantasy's unique high score verification system built into the game. Help Ziggy beat the nasties.

### MANIC MINER

Sheer addition for the Spectrum from the Bug Byte people

### SPLAT

Help Ziggy survive in this extremely playable game from new games company Incentive Software.

### ZALAGA

Space age action from Ardvard for the BBC.

### ATIC ATAC

A great new graphic adventure-style game from Ultimate.

### 3D DEFENDER

Malcolm Evans' game for New Generation Software which set new standards for graphics on the ZX81.

(On The Pyramid, please send your high scores direct to Fantasy at the address on the cassette inlay and NOT to C&VG. Fantasy have their own way to verify scores.)

### JET PAC

- 1) Jonathan Jones, Solihull, West Mids — 7,306,857
- 2) Elliot Potts, Herne Bay, Kent — 5,747,530
- 3) Carl Hornsey, Brighton, Sussex — 5,702,460
- 4) Michael Stuart, Ballymoney, Co. Antrim — 5,653,775
- 5) D. Lawrence, Cambridge — 5,608,180

### MANIC MINER

- 1) Daryl Unwin, Camberley, Surrey — 5,000,083
- 2) Paul Rattray, Kinnoull, Perth — 2,642,037
- 3) Julian Rignall, Dyfed, Wales — 2,000,923
- 4) A. Procter, Leeds — 1,970,815
- 5) Stephen Lynch, Wallasey, Merseyside — 1,763,590

### PARSEC

- 1) C. Sutton, Stoke on Trent — 1,588,300
- 2) Simon Taylor, Cambridge — 1,358,700
- 3) Marc Watson, Bristol — 1,252,100
- 4) Peter, Sheffield — 1,222,700
- 5) Michael Tyrie, Whitby Bay — 1,119,000

### THE PYRAMID

- 1) Scott Hamilton, Lanarkshire, Scotland — 136,616
- 2) Graham Phillips, Chippenham, Wilts. — 136,233
- 3) Steven Lea, Sheffield — 136,022
- 4) Simon Hawkins, Cheltenham, Glos. — 135,999
- 5) Michael Grove, Birmingham — 109,904

### PLANETOIDS

- 1) Paul Dhanan, Reigate, Surrey — 696,200
- 2) Seth Christopher, Willaston, S. Wirral — 694,300
- 3) Matthew Constable, Andover, Kent — 682,800
- 4) Peter Harrison, Exeter, Devon — 593,550
- 5) Calvin Lawrence, Peterborough — 582,225

How many times have you managed to reconstruct the Jetman's rocket ship? Can you defeat the Mutant Telephones in Manic Miner? Have you saved the universe from the Parsec aliens?

Well, if you reckon you are a computer games ace you're a prime candidate for our Hall of Fame — C&VG's answer to all of you hi-scorers who thought you didn't have anything more to prove!

We've selected some top games from top software companies and now we're inviting YOU to send in your top scores on our Hall of Fame game. All the games have been tried and tested by a review team — and all of them are fast, challenging and good value for your precious pocket money.

You can spot Computer and Video Games Hall of Fame cassettes in your local computer store because we've had some special stickers printed which the software companies are sticking on to our C&VG approved games.

So if you are looking for a value-for-money game that will keep its challenge, stay fresh and challenging as the day you first loaded it into your micro for months and months, check out those tapes with a C&VG sticker about their person first!

Meanwhile, if you think you qualify as a top scorer on one of our Hall of Fame Games — listed elsewhere on this page — then fill in our Hall of Fame coupon, get it signed by a witness and stick it on a postcard. Then all you have to do is mail it to Hall of Fame, Computer and Video Games, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

In the New Year we'll invite some of the best top scorers along to a grand finals to prove their skills in the spotlight. In the meantime we'll be printing the top five scorers in our Hall of Fame selection each issue.

And each month we've got a C&VG "The Champ" t-shirt to give away to the top scorer on each game featured on this page. Your score doesn't have to be better than the one we printed the issue before — it simply has to be the highest we've received in time for our current issue's deadline.

We'd also like to hear from you if your favourite game isn't included in the Hall of Fame line-up. Maybe you'll persuade us to squeeze it in!

Computer and Video Games charts page certainly seems to give a true indication of the best value-for-money games around, judging by the results of our Golden Joysticks Awards.

The Hobbit, which is still at number one for both the BBC and Commodore 64, won the award for Best Strategy Game and Manic Miner by Bug Byte won the award for Best Arcade style game.

Further more, Ultimate Play The Game, who have consistently done well in our charts, not only won the award for Software of the Year 1983 but also won the award for that for the Game of the Year 1983 with their game Jet Pac. As you can see they continue to dominate the Spectrum charts with Atic Atac and Lunar Jetman.

Finally, Imagine, with their game Arcadia still going strong in both the Vic-20 and Commodore 64 charts, carried off the award for the Best Original Game with Ah Diddums.

There are still lots of great games bubbling under the charts too, so keep your eyes glued to this space for further developments.

# H·U·R·G

HIGH LEVEL USER FRIENDLY  
REAL TIME GAME DESIGNER

ALL YOU NEED  
IS IMAGINATION

# N.O.W...

## THE GAMES YOU IMAGINE CAN BE THE GAMES YOU PLAY

### DESIGN YOUR OWN COMPUTER GAMES IN MINUTES

Introducing the incredible H.U.R.G. — The ultimate game program for people who want to really play games. With H.U.R.G. the hardest thing you will have to do is to think of a game title, and design the characters.

**HIGH LEVEL** — requires no programming skills — simply draw on the shapes you want, and H.U.R.G. will animate them into the most amazing on-screen action you've ever seen. Choose any setting for your game, from mazes to outer space or sinister caverns — the only limit is your imagination.

**USER FRIENDLY** — H.U.R.G. will lead you through a series of easy to follow procedures, ending in the creation of a game that is as wild as your imagination!

**REAL TIME** — You can see exactly what you're creating at all times. Every game has hundreds of variations, and you can change its features at any time. You can speed up the action, change the size of the characters and even make them more vicious — it's all up to you! and you can see it all on-screen immediately.

**GAMES DESIGNER** — H.U.R.G. enables you to design and store your own games, or choose from over 1000 pre-designed games. H.U.R.G. also enables you to create your own characters and settings.

Now you can create all the stunning arcade effects on your Spectrum that up until now have only been available to professional software houses.

**BONUS**

To really fire your imagination, H.U.R.G. includes three ready-to-play fast-action arcade games, created using H.U.R.G.

Design a Game..  
**WIN**  
**£3,000**

Each month up until April 30 1984, three prizes will be awarded every month for the best games of the month. At the end, the best game will win a grand prize of £3,000.

YOU could be a famous games designer! Every entrant has the opportunity of being published by Melbourne House and earning royalties.

Details of the competition are available with H.U.R.G.

## WHICH STICK? WE PRESENT THE RESULTS OF OUR JOYSTICK SURVEY

A computer without a joystick is like a canoe without a paddle. No self-respecting games player would want to be without a decent stick for his machine.

Opinions vary as to the best stick and video games players are like seasoned tennis pros, when it comes to choosing their favourite.

At C&VG over the last few weeks we've tested just about every stick on the market to bring you this comprehensive guide to the best sticks around.

We have tested the sticks for responsiveness, ease of grip and fire, robust construction of casing, attractiveness, and value for money.

### 1 ARCADE PROFESSIONAL

The Arcade Professional has a real arcade look and feel to it.

Based on the controllers from an actual arcade game, the Professional comes in a shiny black metal case.

It sits on a hard surface or on your lap with a foam base to protect your parents' best coffee table.

Just like an arcade machine there are two fire buttons — useful in games like Scramble where you have to bomb the.

The Arcade responsive the other tested. The ions are true style alien as large as

Pro is as any of sticks we fire but arcade blasters — live pence

pieces and dish shaped to avoid "finger-slip" — that dreaded affliction known to all vid kids!

The Arcade Professional can be opened up to alter the stick's movement — four directions for maze games and eight directions for shoot-'em-ups.

#### THE VERDICT

Robust stick which can actually be repaired unlike some of the plastic throw-away sticks on sale. This advantage, however, makes the Arcade Pro dearer at £38.50. Nice design — will make your friends go green with envy!

### 2 QUICKSHOT

The Quickshot range of joysticks are the slickest, most futuristic sticks on offer.

The original Quickshot stick with its long helicopter-style grip makes it easy to hold.

Rubber suction pads on the base of the stick also make it easier to use — particularly with maze games where you can benefit from the stick being firmly secured to a solid base.

Two fire buttons — one at the top of the shaft for thumb firing and another at the base of the stick — for you to choose your most comfortable fire position.

#### THE VERDICT

Good sturdy construction and comfortable grip. The stick scores best on shoot-'em-up type games where the shaft-mounted button is a real bonus. The bulkiness of the shaft makes the playing of maze games a little more difficult. One of the better sticks — retailing at £11.95. Compatible with Atari 400, 800, 800XL and VCS — will also work with Spectrum through the Sinclair interface.

### 3 QUICKSHOT II

Spectravideo's Quickshot II must be one of the best arcade-style sticks around for video gamers. Its solid design promises hours of trouble-free playing. And you can use it with the Atari VCS, or Atari home computers, the Vic-20, CBM 64 and many others.

The Quickshot II has a number of interesting features. Starting from the top of the aircraft style stick grip, you'll find the primary shooting button — for those games players who like to blast away using their

thumbs. Below this is a trigger style the button which lets those weary thumbs take a rest!

Spectravideo say that the moulded stick grip is "ultra-ergonomic" — and who are we to contradict them. Sullico it to say that the stick is comfortable — even after an extended session of River Raid!

The base of the stick is very sturdy and has a neat little innovation built in — an Auto-Fire switch. This allows you to unleash a continuous stream of bullets by simply locking the shooting mechanism.

To make the stick stable, there are four powerful suction cups on the bottom of the base — this allows you to play one-handed. And the stick won't come unstuck even during the most exciting space battle!

The Quicksot II is available from Spectravideo stockists and costs £12.95.

#### THE VERDICT

A winner from top to toe. The C&VG joystick jury voted the Quicksot II the best stick to come into the office for some time

#### 4

#### RED BALL

America's favourite deluxe controller (or, as they call them in the US, "gourmet stick") is the Wico range of sticks.

It's easy to see why these sticks have been such a success across the water. They are sturdy, responsive, and built to last.

The top of the Wico range is the Red Ball controller at £27.95. This is one of the most responsive sticks we tested — with a steel shaft, and fire buttons mounted on the base and the ball at the top of the shaft.

Slightly cheaper than the Red Ball is the Wico Extended Lever stick. This has an extremely long control shaft, though unlike the Red Ball it only has a fire button on the base.

The cheapest of the Wico sticks is the £16.00 Boss. It has a moulded grip which makes it comfortable to use. A well sprung fire button is mounted at the top of the shaft.

#### THE VERDICT

Wico sticks are generally regarded as the "Rolls-Royce" of video game controllers. If you can afford to fork out £27.95, you'll get no finer stick than the Red Ball — the Extended Lever and Boss are also excellent sticks at a slightly more affordable price.

#### 5

#### TRAK BALL

Trak Ball controllers introduce a new specialist element to video-gaming. Like a professional golfer carefully selecting a certain iron to match the conditions of the green, so a true video games superstar will reach for a Trak Ball to play in certain games — such as Centipede, or Missile Command.

The Trak Ball offers precision control in games where you need to move your character all over the screen as quickly and accurately as possible. It is a sleek black box with triangular-shaped "fire buttons" in both top right and left hand corners.

Trak Ball-style controllers were first used in arcade games, but are now also available for home use and the latest version is Atari's controller for the VCB, 400 and 800.

#### THE VERDICT

I tested the Trak Ball on Centipede and Missile Command and found that it added the real feel of the arcade to these games. Something of a luxury add-on — but if you really take your gaming seriously the Trak Ball is a must at £39.99.

#### 6

#### STARFIGHTER

Sancom's Starfighter is described by its makers as the ultimate joystick.

Short and stubby and difficult to get a good grip on, I did not find the Starfighter very easy to use. Although the stick was reasonably responsive, I found the shaft a little stiff.

#### THE VERDICT

I was not happy with the fire button — it was sluggish and let too many nasty aliens slip through the net for my liking. Starfighter is a little overpriced at £13.95.

#### 7

#### LE STICK

Another baseless stick is Dalesoft's mercury-controlled Le Stick.

What's really unique about Le Stick is that to move an object on screen you simply point the stick in the direction in which you wish the object to move. Mercury inside the stick makes the connections to make the objects move.

#### THE VERDICT

A nice idea — but one that doesn't come off — and we cannot recommend Le Stick. Priced at £24.95.

#### 8

#### VIDEO COMMAND

Video Command is a baseless stick with a control grip secured to the top of the shaft.

The fire button is mounted half way down the shaft so that you fire with the same hand as you hold the stick.

The stick is good on shoot-'em-ups, but the lack of a firm base makes it difficult to handle the tight cornering required in maze games.

Manufactured by Imagic — the makers of the Imagic range of video games — the stick is in the shops at £12.95.

#### THE VERDICT

Design of the stick means that it is extremely lightweight and easy to use. Fire response was adequate. The only drawback is that the short knob controller may make the stick difficult to use in games where a large amount of manoeuvring is required.

#### 9

#### TAC II

TAC stands for totally accurate controller.

The stick's extra responsiveness is due to a set of mini sensors built on to the shaft of the stick itself.

The TAC's construction is amongst the most robust of the sticks we tested.

On maze games, the joystick performed excellently. It also proved to be a good alien slomper.

#### THE VERDICT

This is my work-a-day stick. The one I reach for first when I sit down to review a game for C&VG. Its no-nonsense design with two large well positioned fire buttons makes the TAC II a joy to use. Available from Sancom or Manchester at £18.95.

# FROM IMAGINE

Don't just take our word, see what the experts say....

## JUMPING JACK

(Any Spectrum)

20 levels of crazy, zany fun!

*'Imagine has come up with yet another game that has good graphics, an original plot, and is the sort of game you just can't stop playing'*

# ASTRIKE

Star Fleet command has discovered a nest of nasty aliens hidden in caverns within a small planetoid. You have been given the task of attacking these aliens and thwarting their invasion plans!

The object of this game is to destroy the aliens which litter the bottom of the cavern. There are also fuel dumps to destroy — you'll need the fuel to continue your mission. The aliens will send a ship after you — firing phasers — and this will have to be destroyed or avoided. When you get to the right of the screen another cavern is created. Control keys are: E — up, D — forward, X — down, space bar — stop, F — fire, B — bomb.

## VARIABLES

P bottom of cavern	ZS input variable.
H high score	SK skill level
CO character number.	XIX LULL get variables
CHS character string	R your row, cavern row
SS sound variable	X,O random variables.
RAM to next loops	AS string variable

# THE FIRST IN DYNAMIC PACKAGES FROM PROCOM

**WHAT IT IS**  
Whether you are a beginner or an experienced programmer it will make no difference with the DYNAMIC GRAPHICS package from Procom. You will be able to program professional looking graphics on your Spectrum. DYNAMIC GRAPHICS comes in two cassettes at the price you would normally pay for one. But do not let the low price put you off. DYNAMIC GRAPHICS is by far the most unique and much needed software aid on the market today.

**£14.95**  
inc. VAT and Post

*JUST LOOK  
AT WHAT  
WE HAVE  
IN STORE FOR YOU!*

## TAPE 1

THIS IS A CHARACTER DESIGNER WITH A DIFFERENCE \* FULL SCREEN ANIMATION OF SPRITES \* 27 FUNCTIONS INCLUDING SPRITE HANDLING 96 CHARACTERS WHICH CAN BE SAVED ON TAPE TO USE IN YOUR OWN PROGRAMS \* EASY METHODS OF INCLUDING CHARACTER DESIGNS IN YOUR OWN BASIC PROGRAMS \* NO KNOWLEDGE OF MACHINE CODE NEEDED \* SCREEN SAVING \* SPRITES MAY BE TREATED AS SUPER LARGE CHARACTERS (4 x 4). THE LIST IS ENOLESS. YOU WILL BE ABLE TO DESIGN LITERALLY THOUSANDS OF DIFFERENT CHARACTERS FROM PAC MEN TO SPACE MEN OR SPACE SHIPS TO BATTLESHIPS.

## TAPE 2

THIS IS THE ULTIMATE UTILITY FOR COMPOSING HI-RES GRAPHICS ON YOUR SPECTRUM. AS WELL AS ESSENTIAL HAND DRAW CURSOR CONTROLS (OR JOYSTICK) THERE ARE MANY ADVANCED FEATURES, SUCH AS FAST FILL AND RESCALE. THERE ARE IN ALL OVER 50 COMMANDS. A CONSTANTLY UPDATED STATUS DISPLAY. GENERATED PROMPTS ARE FULLY DISPLAYED. NOW YOU CAN DESIGN SCREENS AS GOOD AS THE SOFTWARE COMPANIES.

- 1 DYNAMIC PROGRAMMING
- 2 DYNAMIC ANIMATION
- 3 DYNAMIC SOUNDS
- 4 DYNAMIC FILING
- 5 DYNAMIC EDITOR & ASSEMBLER

Package for the ZX Spectrum now!  
(Also for the BBC, Electron and CSM 64)

## EASY TO USE

DYNAMIC GRAPHICS is the one that everybody will understand. The instruction manual is simplicity itself! No more strained eyes — the manual has large 10 x 8 pages with plenty of diagrams to make it easy for you.

## YOUR TICKET TO RICHES?

Use DYNAMIC GRAPHICS to make up your own program, and if it's good we will market it for you and maybe make you rich.

# DISK GAMES

FOR THE **commodore**

If you've got a 1541, you don't want to spend all day waiting for cassette games to load. Freed from the restraints of loading times, Audiogenic Disk Games can give you typically around 30K of machine code. More code means better games, better graphics, sound, more variation, and those little extra touches that you will come to expect from a game. Here are our first great releases!

## FORBIDDEN FOREST

Forbidden Forest is more of a quest than just a game! The action takes place in a four dimensional scrolling forest landscape which many have entered, but none has returned. Yes, I did say FOUR dimensional day fades into night as the action unfolds! The quest is to seek out and destroy the Demogorgon, mystic ruler of the Forbidden Forest. Before you can even set eyes on him you will have to contend with his army of fearsome creatures, including mutant spiders, showers of giant frogs, snakes, dragons, skeleton soldiers and more! You have only your trusty bow and arrows to depend on!

## AZTEC CHALLENGE

Embarking on an epic walk Aztec Challenge takes you to a country in Mexico and the ancient pyramids of the Aztecs. The ancient Aztecs were feared by their enemies and that no ordinary human could enter their lands. The temple is divided up into 100 levels. The game is played in a

manner of free, chaotic, freewheeling action. It is a test of your courage and cunning. Aztec Challenge has some of the most different screens, here are just three of them. Each level presents a new and new challenge. We hope you'll pick up the bag!

## SLINKY

Slinky, the spring, was having fun hopping about when suddenly he came upon a pile of coloured blocks, so he thought he'd play around on them for a while. Much to his amazement he found that they changed colour when he landed on them. Wow! But unknown to him, the blocks belonged to the Wicked Wizard, who sent his friends along to tease our poor hero. Slinky is a real fun package with ninety-nine levels, amazing reward displays, and action replays. Where else could you meet such charming characters as Dusty the dust cloud, Marge the magnet, Ralph the random raindrop, and Lorenzo the chameleon hopper?

## FRANTIC FREDDIE

Frantic Freddie is fun all the way! Played to an unbelievable soundtrack of brilliantly arranged tunes, Frantic Freddie contains all the ingredients that make a game into a classic! Freddie is a telephone line engineer who has to climb up and down the telegraph poles, picking up pots of gold and avoiding the dreaded Greeblies. The Greeblies take on a different form with every new screen, but one thing's for sure - they may look cute, but they show no mercy! Frantic Freddie also features wacky messages, funny interludes and silly sound effects. Frantic Freddie - a game with a sense of humour.

**AUDIOGENIC PRODUCTS ARE AVAILABLE IN ALL MAJOR STORES OR BY MAIL ORDER DIRECT FROM US. (MAJOR CREDIT CARDS ACCEPTED)**

PRICES INCLUDE V.A.T. AND POSTAGE AND PACKING

## PEGASIS

Pegasus takes us back to the mythical age when the battle between Good and Evil was fought by heroes on winged steeds. As the champion of the forces of Good, you must topple the evil Black Warriors from their jet black flying horses by swooping down on them from above, then land and finish them off before they can remount. In order to keep airborne, you must keep your wings flapping with the joystick Fire button, and control direction with the stick. The brilliant programming of Pegasus gives you stunning graphics, bonus creatures, great wing flapping sound effects, an incredible simulation of flying horse aerodynamics, plus - two players can play at the same time!

THESE FUN-PACKED PROGRAMS ARE ALSO AVAILABLE ON CASSETTE - £8.95

# TREACHERY

This wonderful creation is the very special Treachery keyboard overlay for your Spectrum. There are two ways to use this overlay. You can cut it out, then stick it on to a piece of thin card before cutting out the key spaces. When you are pasting the overlay on to the card, remember to flatten it out from the centre outwards, making sure you squeeze all the air bubbles out. For best results, cut out the overlay with a Stanley knife or scalpel with a metal ruler to guide your

cuts. If using this method, place your overlay on a thick piece of card to protect your table surface from cut marks. If you use a pair of scissors, try to find a sharp pair with narrow blades. When using scissors, it's probably best to make your first cut in the centre of the keys and cut diagonally to a corner.

If you don't want to cut up your magazine, you could always trace the overlay carefully on to a piece of thin card and then cut it out as above.

It may be 1984, but thankfully Big Brother is still just a distant nightmare. Yet a menace just as perilous threatens the world — the sinister Professor Schweinstein and his terrifying Mandroid! After many years of secret research, Schweinstein recently succeeded in creating what could be the ultimate weapon, a device he called the Mindbomb.

When detonated, the Mindbomb causes no physical damage — instead it simply wipes clean the memories of any human being within ten miles of the explosion. The device is so powerful that even when it is just sitting around doing nothing, it can cause random outbreaks of amnesia for many miles around.

Schweinstein has also perfected a superb method of delivering his weapon to the required target — the Mandroid. In reality an android, this machine so closely resembles a man that it is virtually impossible to detect, especially in a large city.

With the Mindbomb concealed in the Mandroid, Schweinstein imagined he could control the world!

However, just as he had completed the Mandroid and Mindbomb, disaster struck. An accident occurred in his laboratory and Schweinstein forgot his plans for world domination. In fact he forgot everything he'd ever known! He forgot all about the Mandroid and the Mindbomb. He forgot where he had hidden the Mindbomb's remote firing button. He forgot where he had planted the Mandroid's homing beacon. He forgot about the two blackmail letters he had sent to the British and Soviet governments. He even forgot about his two hollow teeth — one of which contained the antidote to the amnesia and the other which concealed a micro-disc (another of his inventions) which detailed the entire history of his researches!

# SCHWEINSTEIN

Now both M16 and the KGB are engaged in a desperate search for Schweinstein, the Mindbomb firing button and the homing beacon. They know where the Mondroid is — at least they know which city it is in at any one time by simply asking local hospital staff how many cases of amnesia they have admitted on any one day.

Beyond knowing where the Mondroid is, they can go no further in tracking the thing down and must let it wonder the cities of Europe until they can bring it under control.

Schweinstein himself is equally elusive. He is a broken man roaming the urban wilderness in search of his lost identity. Whichever side finds him first and contrives to spirit him back to their HQ will have pulled off a tremendous intelligence coup.

Meanwhile the deadly Mondroid is also wandering across Europe and both M16 and the KGB must stop the other side gaining control of the homing beacon and firing button. With these two devices it would be possible to wipe out the opposition's intelligence network. While the Mondroid is on the loose, London and Moscow are in danger of losing their minds!

Can YOU prevent disaster by finding Schweinstein, the Mondroid and the Mindbomb? How do you go about it? Read on.

## WINNING AND HOW TO GO ABOUT IT

The winning player must either capture Professor Schweinstein and take him back to HQ or lead the Mandroid to enemy HQ and detonate the Mindbomb. The HQs are either in London or Moscow.

Neither player knows the exact whereabouts of Professor Schweinstein. However they both get certain clues as to his location. During each turn, the computer will inform each player where Schweinstein was three "days" ago. The Schweinstein counter is then moved to that city on the main map of Europe.

If either player orders a search of a city and Schweinstein has been there within the last two "days", then the player will be informed how many days ago the Professor was in that city.

If Schweinstein is actually in the city at the time the search is ordered, then the Professor will be captured by the agent who initiates the search.

The computer moves Schweinstein randomly about the board with the following restrictions:

- 1) He will never stay in a city for more than one turn.
- 2) He will never return to a city he has visited on the previous turn.
- 3) He will never go to London or Moscow at his own accord.

At the start of the game, both the Mindbomb's firing button and the Mandroid homing beacon are buried in secret locations and neither are active. During this stage of the game, the Mandroid is moved about the board by the computer completely at random. When the beacon is found and switched on two things will happen:

- 1) The beacon counter is placed on the board in the correct location.
- 2) The Mandroid is moved randomly towards it — i.e. to any city which takes it nearer the homing beacon.

If the beacon is switched off again, the Mandroid moves entirely at random once more.

## HOW THE GAME WORKS

In most board games, once you have decided what to do with a piece, you simply pick

it up and move it and when something happens to a piece, you get to know about it immediately. Treachery is quite different.

Scattered across Europe are 36 secret agents, some of which you control, some of which you think you control and some of which you definitely don't control!

To get an agent to do something, first you have to send him a message from HQ containing your orders. And, if you want any information from him, he first has to send a message to HQ containing his report.

Any messages going between an agent and HQ must be routed through a continuous chain of agents in adjoining cities. For instance, to get a message from Moscow to Tongier, the shortest route would be Istanbul-Athens-Tangier and you could use your agents in those cities to pass on the message. Of course, there are a large number of alternative routes for any message. The only restriction on your choice of route is that only eight agents can be used for one message.

So far, it seems simple enough. There is, however, a catch. Some of the agents you use to pass on the message may be traitors, apparently your agents but really under the control of the enemy! If so, nasty things can happen to your message.

Firstly, the traitor will memorize the message and try to report its contents to his own HQ on the following day. Secondly, your message might be stopped altogether and never reach its destination.

If the traitor intercepting the message is ASLEEP, he will pass your message on along its chosen route; if he is AWAKE or ACTIVE he will stop its progress permanently.

If a message is stopped, you may not get to know about it until it's too late. In the case of orders, you only know that they have been sent out and unless the order has an obvious and visible result such as your agent moving to another city, you will not know for sure that it has been carried out.

In the case of reports to HQ, you are told that the report has not actually arrived but you still don't know which agent in the chain is

the traitor

Things can get more complicated still when the traitor tries to report your message back to his own HQ. One of your agents might intercept the traitor's report and memorize it to send back to your HQ. When your agent tries to send his report in well, it could go on forever.

Fortunately, the agents have limited memories and messages about messages about messages are only embedded to a depth of three.

## ONE DAY OF TREACHERY

- 1) The British flag appears on the screen and a British signature tune plays. The M16 player is asked to enter his clearance code before he can access the Top Secret operational file.
  - 2) M16 reports. The M16 player calls in yesterday's reports from his agents in the field. He can call in to HQ a maximum of five reports. If a report fails to arrive, it still counts towards this total. The player doesn't have to call in a report if he doesn't want to.
  - 3) M16 Orders. The M16 player sends orders for today to his agents in the field. He can send a maximum of three orders but he can send as few as he chooses.
  - 4) The Russian flag appears on the screen and the same sequence as the M16 player's is followed by the KGB player.
  - 5) The end of the day. The computer memorizes all of today's messages and executes all of today's orders (or, at least, the ones that reached the agents concerned). Then it lists on the screen any events that are public knowledge.
  - 6) The game moves on to the next day.
- When one player is using the computer to call in and send out his messages, the other player must be out of sight of the screen, otherwise he would see information he's not entitled to.
- Name of the pieces on the board should be moved or removed until stage five, the end of the day. At this stage, both players can look at the

screen. All they need do is follow the computer's instructions as to which pieces have a new location and which pieces need to be removed from the board. (NB if the Mindbamb explodes, all the agents in that city must be eliminated.)

On his first turn, each player enters a six-letter clearance code of his own choice before accessing his top secret file. The player should make a very careful note of the code.

After turn one, he won't be able to access his file again unless he enters the correct code. This is to stop the other player trying to cheat by accessing his opponent's file.

Because there is such a lot of information going backwards and forwards each turn, we have included a hard-copy aptian for each of the information pages a player can access.

Once such a page is on the screen, by pressing COPY (key Z) the player can get a copy of that page on the ZX printer. If you haven't got a printer, we suggest you keep pen and paper handy to make a note of any important items of information.

## THE AGENTS

There are 36 agents in the game and each agent has two ranks, one his rank in M16, the other his rank in the KGB. An agent is always loyal to the player he ranks highest with, this player is his controller. The agent is known as the dummy!

However, players are only told by the computer the rank each agent holds in their own organisation. So, at the start of the game, they have no idea which agents are really theirs and which are traitors! Only the computer knows this.

Two numbers, M16 rank and KGB rank, define the type of agent. The 36 agents are comprised as follows:

- 1 4-3 M16 Master Spy
- 2 3-2 M16 Triple Agents
- 4 2-1 M16 Double Agents
- 8 1-0 M16 Single Agents
- 6 0-0 Coumers under no player's control
- 1 3-4 KGB Master Spy
- 2 2-3 KGB Triple Agents
- 4 1-2 KGB Double Agents
- 8 0-1 KGB Single Agents

So, each side has 15 loyal

# TREACHERY

# THREE EXCITING NEW GAMES IN THE LIVEWIRE SERIES FOR THE 64 FROM **SUMLOCK** MICROWARE

## GRIDTRAP 64

We promise you won't be able to turn it off! It's a real skill tester and loads of fun to play!

Play with the Keyboard or Joystick. Choose your own operating keys with our **User Definable System**. Compete with an opponent by selecting **Two Player Mode**. Great graphics, super sound effects in the Livewire tradition. Including a selectable **Melody Mode** where the tune is available at the touch of a key and **Melody On** is indicated by a quaver graphic.

Program No. LW04 £8.95

Not just a game... an Experience!  
IT HAS IT ALL! EXCITEMENT  
HUMOUR STRATEGY

Jumpin' Jack leaps into a totally new look for the 64 created by **Three Dimensional Graphics** giving **Full Perspective** to the game. PLUS hosts of features never seen before!

Submerging Turtles... Snakes  
Crocodiles... Others... Lady Frog  
...Dragonfly!\*

It's Fun \*\*\*

IT'S PROGRIFIC \*\*\*

Program

No. LW02 £8.95

## JUMPING JACK 64

## TRIAD 64

NEVER BEFORE HAS A  
COMPUTER GAME LOOKED  
SO EXCITING

... FELT AND PLAYED SO  
EXCITING

Watch astonished as the Triad  
hull themselves towards your  
craft in a remorseless battle  
against your intrusion.

Feel the heat blast of their anti-  
matter fields.

Your pulse laser will have to  
turn white hot before this  
encounter is over.

Featuring

A new DIMENSION

into the realm of TOTAL  
PERSPECTIVE GRAPHICS

Program No. LW03 £8.95

## SUPERB SOFTWARE FOR THE VIC 20

**SP 04 GRIDTRAP**  
Defeat the center  
watch out for the  
moving and winking  
bullet... joystick or  
keyboard  
M/rode £7.95

# SUMLOCK MICROWARE

1 year 24-hour hotline. Telex: 240000. Telex: 240000. Telex: 240000. Telex: 240000.

agents and there are six neutral pieces. However, at the beginning of the game, it will appear to each player that he controls one Master Spy, three Triple Agents, six Double Agents and 12 Single Agents — a total of 22 agents. Seven of these agents are, in fact, traitors whose treachery may be revealed later in the game.

## AGENT STATUS

An agent can be ASLEEP, AWAKE or ACTIVE. At the start of the game, all agents are ASLEEP except the Single Agents, which are ACTIVE and do not respond to the enemy at all. Only the player really in control of an agent can change its status.

An agent who is ASLEEP will obey orders from either player and pass on messages from either player. If both players try to give him orders, he will choose to obey his controller's orders only. An agent who is AWAKE will still obey orders from either player but he will stop any messages from the dummy. An agent who is ACTIVE will only obey orders from his controller and will stop any messages from the dummy.

In all cases, agents will only report back to their controller, even if the report is in response to an order given by the dummy.

COURIERS will pass on messages from either player but will not obey orders from anyone nor make any reports. They remain in the same city throughout the game.

## ORDERS YOU CAN GIVE TO AN AGENT

GO TO (CITY): Your agent moves to an adjacent city.  
KILL (AGENT): Your agent kills another agent. Both agents must be in the same city. No agent will obey an order to kill himself!

SEARCH (CITY): Your agent searches the city he is in for Schweinstein, the Firing Button or the Homing Beacon. If he finds one of these, he will report its presence and stop his search. If the object does not belong to anyone else, he will capture it if it does, he will just report that it's there.

STEAL (OBJECT) FROM (AGENT): Your agent steals Schweinstein, the Button or the Beacon from another agent. The other agent must

be in the same or an adjacent city and he must possess the object.

HIDE (OBJECT): Your agent hides Schweinstein, the Button or the Beacon in the city he is in. Your agent must possess the object. Once the object is hidden, no one possesses it.

TRANSFER (OBJECT) TO (AGENT): Your agent transfers Schweinstein, the Button or the Beacon to another agent. The other agent must be in the same or an adjacent city. Your agent must possess the object.

CHANGE STATUS TO (STATUS): Your agent is ordered to become ASLEEP, AWAKE or ACTIVE. This order will only succeed if you are the controller. If you are the dummy, his status will not change.

SWITCH BEACON (ON/OFF): Your agent switches the Homing Beacon on or off. He must possess the Beacon.  
EXPLODE MIND-BOMB: Your agent detonates the Mind-bomb in the city where the Mandroid is. Your agent must possess the Firing Button.

An agent can only obey one order per turn. You can attempt to give an order to an agent you choose, yours or not. You can also attempt to give orders that can't be carried out. Such orders will be sent as messages in the normal way and may even reach the agent concerned.

All that will happen to an order that can't be obeyed is that the computer will ignore it at the end of the turn. You will only get to know about it indirectly, from the fact that the agent has not carried it out.

The same applies to the routing of messages. You can give an impossible route for a message if you choose (or care less). The computer will not tell you that the route is impossible. It will just move the message as far as it can along the route and then ignore it.

## STARTING THE GAME

When you RUN the program, the British and Russian flags appear on the screen and the two signature tunes play. There is then a five minute or so delay while the computer works out the details of its "telephone network". We suggest you use this time to

place the agents in their starting positions and to explain the rules to your opponent (or yourself).

When the game is ready to go, the British flag appears on the screen with the Top Secret document page. The MI6 player enters his chosen clearance code and the game begins. Note that the game actually starts on day

three of the crisis. This might seem silly, but in fact it's to prevent negative day numbers appearing — remember, Schweinstein's position up to three days ago has to be kept track of by the computer. Also note that neither player can coll in reports on the first turn — there aren't any to coll in!

#### Starting points for agents.

FIVE	MOSCOW
SIX	MOSCOW
SEVEN	MOSCOW
EIGHT	MOSCOW
NINE	MOSCOW

#### Program notes

The program uses 20 user defined graphics characters, mainly to print the flags. In the listing these have been left in letter form so you can identify the right key to press more easily.

All the strings in the following lines contain graphics made characters and not alphabetic characters. (To enter these lines, change to a "G" cursor by pressing caps shift/9 before typing the letters, and then return to a normal cursor with caps shift/9 again to finish typing the line R\$). The lines are: 100-140, 510, 525, 2310-2325, 2380-2381.

There is not space here to describe in detail how the program works but a study of the listing should reveal most of its mechanisms. When you run the program there's a long delay while the computer calculates Z\$ (city, city). This array stores the shortest distance between any two cities. If you want to eliminate this delay, do a dummy run and then save Z\$( ) as an array to tape. Then replace lines 2800-2880 with a statement to load Z\$( ).

## IF YOU THINK YOU'VE GOT THE BETTER OF YOUR COMPUTER, YOU'D BETTER THINK AGAIN....

We all enjoy a good action game on our home computers, but for a while doesn't chasing the screen as a screen wear a little thin? It's the time to take on the challenge of a Wargame strategy game — plenty of action, plenty to think about, and plenty of titles to suit every taste.

Take on Wargame and really put your home computer through its paces.

### CONFRONTATION

Anti-on game that offers a basic format for any modern, non-nuclear conflict. Contains a modern European scenario with facility to create others of your choice using air and land forces.

Two-player game  
Spectrum 48K  
BBC-B

£7.95  
£7.95

### RED BARON

Offers the excitement of arcade action but requires the tactical thought of war games. Pit your biplane against one or two of the Kaiser's aces in this aerial combat game.

Spectrum 48K

£5.95

### PARAS

Dramatic all-graphics campaign. Your hand-picked force has dropped behind enemy lines to capture a strategic river crossing. Two versions of the game with ten levels of play.

BBC-B

Spectrum 48K

One 148K (coming soon)

£5.95

£3.95

£5.95

### JOHNNY REB

There's still plenty of fight left in the Confederate South as each side selects forces to manœuvre on a full-graphics battlefield. Play against the computer or challenge a friend.

Spectrum 48K

Oric 148K

BBC-B

Dragon 32/Tandy Colour 32K

Commodore 64 (coming soon)

£5.95

£3.95

£5.95

£5.95

£5.95

### DREADNOUGHTS

Suspense-filled high seas drama as the pride of the German Grand Fleet is locked in battle with the Royal Navy.

Two-player game

Spectrum 48K

£5.95

### BATTLEZONE 2000

Futuristic wargame. You tanks, missile launchers, infantry etc have to destroy an all powerful computer controlled battle machine. Can you save Planet Earth?

BBC-B

£5.95

Available from John Menzies, Lightning Dealers and better software shops or clip the coupon for fast delivery.

## **CARTRIDGE LIBRARY**

Do YOU want the best?

Then get it with **M.D.M.** the fastest growing cartridge library in the country — now read on

- ★ Hire charges from 17p per day
- ★ Latest arcade-type games from America
- ★ New titles added regularly
- ★ Fast reliable service
- ★ Life membership now £10.
- ★ Members eligible for generous discounts (hardware and software)
- ★ Hire what and when you like
- ★ High score charts
- ★ No cartridge is unobtainable

**JOIN NOW** on money back approval send S A E or ring 0282 697305 to:

**MDM Home Computer Services,  
Dept. 4, 20 Napier St., Nelson,  
Lancs. BB9 0SN.**

## **NEW GAMES WANTED!**

And if YOU'RE game, this could be just the opportunity you've been looking for!

Following the success of the initial launch into the computer software market with the K-tel DOUBLESIDER range, we're now looking for exciting new games to continue the series. And this is where you come in

If you've got a great games program for either the Commodore 64 Vic 20 or Sinclair Spectrum, let's hear all about it. What we want is high quality, nifty graphics, original ideas and good, old-fashioned fun

So you think that your game might fit the bill? Then send a cassette copy with details to Mike Dixon, K-tel International, 620 Western Avenue, London W3 0TU straightaway. Or telephone him on 01-992 8055.

And remember programmers... use your computer for fun. And profit

At last, the first joystick that puts the fire button where it should have been in the first place.

Extra responsive action  
Trigger Fire Button

Diamond Cut Arcader Style Grip

**IS HERE!**

Extra long 4 ft Cord

**The Top American Joystick is now available in the U.K. . . .**

**To fit your SPECTRUM ONLY £19.99 + £1.50 P + P**

- Including Interface to plug straight into the Spectrum.
- The first Joystick to give you "Arcade" feel and control.
- "Jet Style" heavy duty, diamond cut grip.
- Fire Trigger placed under your index finger... the finger with the fastest reflex action
- Self centring, 360° action.
- Compatible with most of the latest Software including:

Flight Simulator	Arcade	Pontenar	Spectrum
Mini-Miner	Powder Kegs Shog	Atle Atle	Jettan
Jetpack	Shogun's Son	Elan Damage	Progen
Cricket	SS Enterprise	Lost Sonnet	Galactic
PSS-57	Iron Foe	Mazman	Galactic
Tempest	Messengers	Gutierrez	Galactic

# AGF PROGRAMMABLE JOYSTICK INTERFACE

MICRODRIVE  
COMPATIBLE

ONLY  
26.95  
+£10.00 P.P.

for  
**Spectrum**  
or **ZX81**

## AGF PROGRAMMABLE INTERFACE

Recognised as the only true Hardware Programmed joystick interface this product offers all the features associated with such a design.

You can use any Atan-compatible joystick controller with any software for your Sinclair Spectrum or ZX81, not just those with a joystick option.

Movement of the joystick is recognised by the computer exactly the same as pressing the appropriate control keys, and can therefore give the most immediate response to the movement. The hardware programmed design works with all possible key-pressing methods, both BASIC and Machine Code.

Eight directional movements, with or without the fire button being pressed, can be achieved by only programming the left, right, up, down and fire keys required by the game.

Programming is achieved by a two-digit code, which is looked up on the Programming Chart supplied, for each direction and firing button. These two symbols are then entered on a pin of leads which are clipped onto appropriately numbered strips on the interface.

Once configured this can be marked onto a Quick Reference Programming Card for saving with the game. As the programming is not power dependent the interface can be immediately used when next switched on.

The keyboard remains fully functional and can be used simultaneously with the joystick.

An integral rear expansion connector means there is no need to remove the interface to insert other peripherals.

NR, A recent design improvement now means that the AGF Programmable Interface works with the new Quickshot II rapid "Auto fire" feature.

## PACKAGE CONTENTS SUPPLIED

- Programmable Interface Module as illustrated, complete with slip-on programming leads.
- Self-adhesive programming chart detailing how to define which key is simulated by UP, DOWN, LEFT, RIGHT, and FIRE.

- One pack of ten Quick Reference Programming Cards for at-a-glance setting to your game requirements.

- 12 months guarantee and full written instructions.

## KEY FEATURES

- Programmable design gives TOTAL software support.
- Examples: Adam, Competition Pro, Wico, Starfighter, Quick Shot, Le Stick etc.
- Rear extension connector for all other add-ons.
- Free demo program and instructions.

ONLY  
16.95  
+£1.50 P.P.

## SOFTWARE

## DOOMSDAY CASTLE

is an arcade style game  
with the feel  
of a real adventure

Doomsday Castle consists of a labyrinth of 76 complexly inter-connected Halls and Passages where you will meet a whole host of adversaries serving the infinitely evil Scarthax, the Garthrog, the Orphacs, the phenomenally nasty Googly Bird and the Urks which manifest themselves in over fifty unbelievably weird and wonderful guises.

Scarthax has scoured the Universe to bring together the six ancient Stones of life force. United in Doomsday Castle they are being used to wield an irresistible power over the cosmos, emanating waves of corruption through every galaxy.

To save the Universe, you must battle your way through the Castle to find and collect the six stones and use their force against Scarthax to destroy Doomsday Castle, hopefully escaping yourself before the final cataclysmic explosion. The task is not easy (saving the Universe never is!) and it will take you many games to unfold the structure of Doomsday Castle and discover the locations of the ancient stones. The addictive arcade style action will keep you coming back to play but the overall challenge should still keep you occupied for months.

You take on the role of our super hero shown here above in his exploratory capsule in combat with an Urk disguised as a pangalactic gargleblaster (!!) This is a true representation of the on-screen graphics.

The siege has been on for weeks. The invading troops have surrounded your castle fortress and are waiting for you and the rest of the inhabitants to surrender or die of hunger.

The conflict has suddenly taken a turn for the worse. The frustrated troops are tired of waiting for the surrender and have attacked the fortress! Men are now swarming around the towers and battlements you are guarding, and have started clambering up the walls. You'll have to act fast to save your beleaguered people from being slaughtered to death in their beds.

The only option open to you is to knock the invading soldiers down the outer wall by dropping rocks on their heads. More and more reinforcements are called and your task becomes a frantic race against time.

Can you save the medieval castle from the marauders or will you be overcome and allow the fortress to be ransacked?

Can you escape from this e-maze-ing 3D maze? Will you be able to discover the map which tells you the secret of the hidden exit? Or will you be too greedy and go for the gold strewn around the maze and be trapped forever when the hidden exit closes? Well, get typing and find out — you'll never know if you just sit there!

Full instructions can be found in the program, but here are a few notes which might help you get more out of the game.

The data for the maze can be found at the end of the program in four large arrays. You could create your own mind-boggling maze by playing around with the program using the following code.

0=wall, 1=path, 2=right hand turn, 3=left hand turn, 4=right hand turn with dead end, 5=left hand turn with dead end, 6=crossroads, 7=T-junction, 8=doorway, 9=dead end.

The location of the map can be changed in line 3010 to make your game harder — or easier. At the moment you'll find the map at location 11,7

# MR CHIP SOFTWARE

## SPECTRUM GAMES

### SPECTRUM DARTS (48K)

Five games of darts for 1-5 players, 501, Cricket, Killer, Round the board, Noughts and Crosses, four levels of play per game, take on the computer or friends at these games of skill and judgement **£5.50**

### WHEELER DEALER (48K)

A game for two to twenty players, become a tycoon of the motor trade, you must obtain gearboxes, tyres and engines to produce cars for sale. Form syndicates, buy and exchange parts, buy dealerships, but be careful, you may become bankrupt and have to liquidate, find out what you are made of, have you got what it takes to become a WHEELER DEALER **£5.50**

## VIC 20 GAMES AND UTILITIES

### JACKPOT

This is it, the ultimate Fruit Machine for the VIC with nudge, hold and respin 100% machine code. Overall Jackpot is a beautifully written simulation giving superb graphics, animation and use of colour. In fact, this program makes Commodore's Fruit Machine cartridge look unbelievably cheap and nasty. Home Computing Weekly No. 20 19/7/83 **£5.50**

### KWAZY KWAKS

Accuracy and speed are required for this Shunting Gallop, superb use of colour and graphics in this new and challenging game from the author of *Jackpot*. 100% machine code, joystick or keyboard control **£5.50**

### PACMANIA

Choose your own game from the following options -- difficulty 1-3, speed 1-3, size of maze 1-3, visible or invisible maze, still or moving power pills, define your own key controls, any combination, if this is your type of game, then this is the one for you, for the 1K expand VIC **£5.50**

### MINI-ROULETTE — PONTOON — BLOW

Three great games of chance for the VIC, try to beat the computer, hours of fun, full colour, sound effects and tunes **£5.50**

## COMMODORE 64 GAMES AND UTILITIES

**JACKPOT 64:** At last it's here, specially written for the 64, by the author of "JACKPOT" the ultimate Fruit Machine program for the VIC **£5.50**  
(available from 1st Nov)

### WESTMINSTER

A game for up to four players, can you lead the party of your choice and win the general election, you tour the 60 constituencies (seats) buying votes, when you can, (just like the real thing), this must be one of the first board type games specifically written for the computer. Why play on your own, have fun with your family and friends playing WESTMINSTER **£5.50**

**RED ALERT:** A game for 1-4 players, with sound and graphics, make money in casinos, commit robbery, hide from the police, hire secret agents, (some of whom can be treacherous), negotiate for weapons, find and attack the secret rocket base to launch the missile, and watch the havoc and destruction caused. There's no turning back from "RED ALERT" (available from 1st Nov) **£5.50**

**WHEELER DEALER:** As for the Spectrum, but now available for the Commodore 64 **£5.50**

### LUNAR RESCUE

Our new version, avoid the asteroid belt, to rescue the stranded scientists, then fight your way back to the mother ship, fast reactions are required to safely land and dock your lunar module **£5.50**

**CHIPMON:** Contains a one- or two-pass Assembler, Disassembler and Monitor. A programming aid for the development of machine code programs and routines on the CBM 64 **£12.50**

Other software available for the VIC and Commodore 64, send large S.A.F. for free colour brochure, including RABBIT SOFTWARE at £5.00 each.

Send Cheques/PO's to:

DEALER ENQUIRIES WELCOME

# MORE THAN A LOAD OF BALLS

The pink's teetering on the edge of the pocket, the red's partially blocked, and now it's make or break.

Do you add a touch of spin or do you play safe?

Do you try for the trick shot or go for the snooker?

Visions Snooker brings all the excitement and all the tension of big time tournaments to your TV set.

With an advanced programme written by a 19 year old undergraduate at Queens College Cambridge, it makes Pot Black look like a load of old balls.

Visions Snooker. It's an exciting test of your skills on the cue. And it's yet another great game from Visions.

The ultimate name in video games.

# Light on the HORIZON

One of the most exciting events since the introduction of the home computer will be the arrival of laser disc video systems which you can plug into your micro.

You'll be able to play games with graphics you've imagined only in your wildest dreams. But before you rush out to buy a laser disc player, read on and take note.

I saw my first demonstration of a video disc player eight years ago — and was shown a disc made from a material similar to cellophane and as thin as paper.

It was pointed out that people would be able to type on these discs, stick stamps on them and mail them through the post and they would still play when they came through the letterbox! You could simply wash off the ink and stamp and stick them on your disc player! A great idea — but it doesn't exist in a viable form today.

What does exist is the rigid disc — the type you'll see in most video stores and which are used in the arcade laser games. The picture quality on these discs is amazing and finding your favourite bit of film is easy as the picture remains perfectly stable on the screen, even when you are searching at extremely high speeds.

But eight years ago it seemed that no company wanted to sell laser machines for industrial purposes and the domestic consumer wasn't — and still isn't — interested in buying a player for the home as you cannot record on a laser disc.

All that could change thanks to a development which enables you to connect a special laser player to a micro and to some form of videodata system — such as the Prestel service from British Telecom.

This month Philips are launching a complete system which can include a special laser disc

unit, microprocessor, teletext generator and encoder and touch sensitive TV screens, so you don't even need keyboards or joysticks. IBM have taken this and coupled it with their new IBM personal computer with special applications for industrial use.

But what difference will all this make to the average computer games player? Well, at the moment not a great deal — but the future beckons! Right now a

unfolds.

If the player makes a wrong choice — or one that the machine's memory has been told is wrong — an alternative piece of animation is shown depicting the instant demise of our hero Dirk in true Tom and Jerry fashion!

Although the player thinks he is controlling Dirk's destiny, in reality all he is really trying to do is guess the secret combination that will keep the animation running.

Other laser games use film footage of a landscape and superimpose computer-generated graphics of missiles or enemy spacecraft — as in *Astron Belt* and *Interstellar* — and a fairly simple game becomes visually very exciting.

Home computer games players will get the laser treatment once videodata links are established and in full use.

Already systems like Micronet provide subcri-

bers, who have Prestel and appropriate computer hardware, with the ability to download programs over a telephone line.

For laser disc systems, supporting computer software can be available from three sources. Firstly, a program could be encoded onto the beginning of the laser disc and loaded automatically into the computer when the disc is in the player. Secondly, the computer software could be supplied in conventional form — like floppy discs, cassettes and cartridges. Thirdly, the software could be called down from Prestel.

A system which gets its software from Prestel has other advantages too. The games could be altered slightly every day — so just when you think you've beaten a game, you'll discover the next day that new challenges have been added! This could extend the active life of games and prove invaluable in interactive Adventures.

This would also be highly attractive to arcade owners who can only afford to get hold of exciting games if the cus-

***Laser-disc games are revolutionising the arcade scene with a stunning combination of cartoon-style animation and computer graphics. And soon the laser disc could be doing the same for computer games! We asked video expert Andrew Earle to take a look at the shape of games to come — and the future looks very exciting!***

complete system would probably set you back about £2,500 — far out of the reach of most home computer games players. And at the moment there is hardly any software to support such a unit.

But these systems will find their way into the arcades which will have obvious benefits for the games player — and the arcade owner. From the gamer's point of view, you are now able to play games that use real picture information recorded on conventional film and video cameras and not computer-generated graphics. *Dragon's Lair*, perhaps the most well known of the new laser arcade games, uses conventional animation techniques to provide full cartoon animation with real sound effects and voices.

The principle behind *Dragon's Lair* is really quite simple. There is a complete animation sequence which will play through unhindered, provided the player makes the correct choices using the machine's controls at appropriate intervals as the story of Dirk the Daring

tomer keeps putting the money in. Nothing worries an arcade owner more than watching players monopolise a machine for a whole evening on just 20p to prove to their friends that they can reach six-digit scores!

Another advantage stemming from the Prestel-style systems is that daily average scores could be collated via the telephone lines, so the programmer or software company could see just how much they need to adjust the program to ensure that the games player finds it continually challenging — and the programmer doesn't lose money!

There are two additional twists in the laser disc tale that make the future even more exciting. The first is that Sony have succeeded in developing a laser system that can record as well as play back. At £20,000 it's probably slightly out of your price range at present and it won't be appearing in arcades for a while yet. But give it time. All things electronic get simpler and cheaper!

The second twist is the development of cable TV. With this it would be possible to record the visual part of your game overnight from your cable service and then load the computer software from Prestel. The following morning you'll wake up to a brand new video game with the most unbelievable graphics.

Because the system is amazingly interactive, we can imagine a version of C&VG's Seventh Empire available on Prestel and cable where you could see Kenneth Kendall giving an up-to-date news report on the current state of the Empire day by day — and you'd be playing 1,000s of other games!

The laser disc has already revolutionised the arcade game — where computer graphics are rapidly becoming a thing of the past — despite the considerable cost of the new laser machines. And ColecoVision, the home games people, have announced a deal with the company who brought out one of the first laser arcade games — *Dragon's Lair*. Coleco are apparently working on a laser disc attachment for their video game system — and *Dragon's Lair* will be the first game on it.

Laser disc software manufacturers are already considering selling discs for home use, so you could get arcade style games to run on your specially adapted computer — or home video centre!

The video disc player is a complex bit of machinery. It incorporates precision optics, a microprocessor system and laser technology to read information from the disc as it spins at 1,800 revolutions per minute.

The disc itself is plastic coated metalized material and, like an audio disc, is encoded with information in the form of a series of bumps and pits within a spiral track. Each image you see on the screen requires one

complete revolution of the disc as it passes beneath the laser beam which reads the disc. Each side of one of these discs can store up to 54,000 individual pictures on the tracks.

Discs used in arcade machines are one-sided — unlike discs for domestic players — and have an aluminum backing plate to prevent warping. The actual laser in the machines is a helium-neon design and produces a narrow beam of red light which reads the disc and — after passing through a complex optical process — is converted into electrical signals which are then processed by electrical circuits in the machine.

Rumours abound about the new laser games about to hit the arcades — a science fiction special effects company in the States are apparently working on a special 3D process for forthcoming discs.

Victor Penman, the man who watched over the creation of *Dragon's Lair* reckons that the next generation of games will involve other senses — enhanced by the laser animations. So maybe in a couple of years you'll be able to smell those evil aliens coming at you across the stars and feel the icy grip of their tentacles!

Maybe programmers will have to learn to use film cameras or become animation experts instead of simply brushing up on their computer language!

The laser disc will open up whole new possibilities for those of you who enjoy playing interactive games — *Dungeons and Dragons* with amazing 3D animated monsters and weird landscapes, Adventure games with real life locations filmed on disc. The possibilities seem endless.

It seems that simple computer-generated graphics could soon be a thing of the past.

Multi-screen games with incredible graphics and the facility for several players to take part at once are glimmering on the games horizon — not just in the arcades either!

Believe us, the laser disc is going to revolutionise games playing at home and in the arcade in the months to come.

*Dragon's Lair* is just the beginning of what looks like becoming a major new section of the games industry. The future certainly looks exciting!

*Lucky You!*

# Orion

For the 48K Spectrum By Ian Beynon

After an attack by the Dark Horde, 100 of your Beta Class androids were kidnapped. Your mission is to rescue the androids from the maze of underground passages beneath the palace of Nedab, leader of the Horde. The 25 caverns are layed out in a 5 x 5 grid. Starting from the central cavern, you must journey through them all collecting your androids (4 in each cavern). Nedab, knowing of your mission has put his green Zygon guards on patrol. Although these creatures only wander around aimlessly, they prove lethal on contact. Your Orion buggy is equipped with WX110 force screens which, when activated, enable you to destroy the Zygons. The white Renlin will also prove to be a hazard. These can be ran over for extra points, but they your scanners will be disabled until another android is rescued. Good luck, and watch out for the purple Power Guzzlers.

In this adventure you must face and overcome fiendish puzzles, deadly problems and a complex plot. A unique feature of "Legion" is a variable skill level which allows certain problems to be overlooked.

The object is to gain enough points to be classed as a warrior by Caesar, then go in search of the great treasure of Egypt. Then, if you are still alive, take the treasure back to Caesar himself.

★ JUST TWO OF THE EXCITING GAMES FROM OUR CATALOGUE.

★ AVAILABLE FROM SELECTED BRANCHES OF JOHN MENZIES.

BY FRANK ROONEY  
RUNS ON A SHARP MZ80K

# LOST IN THE JUNGLE

Well, this is it! Now you can finally find out how to get out of Frank Rooney's jungle. For those of you who have been stuck among all these swamps, snakes and other dangerous beasts (this last part of the great adventure will come as a great relief. For those of you who have missed the first two parts — where have you been? Grab those back issues NOW! We hope you'll enjoy playing the game since you've keyed the final section in. And remember if you have any problems out in the jungle don't call on Tarsan — call C&VG's resident Bugmaster.

He's been practicing fighting crocodile and swinging through the trees and is ready and willing to deal with any problems — unless it concerns a Rhinoceros in your front room. He's not very keen on Rhinos.

# The No.1 Football Game

**2X81 16K**  
**2X Spectrum 48K**  
and our exciting coming soon!

## Football Manager

Designed by Kevin Toms

This outstanding game of skill and strategy is now widely available and you can join the many thousands of satisfied customers who have purchased the game. This is no five minute wonder – you will be playing this game for hours over many weeks (we know – our customers tell us!).

Kevin Toms

Some of the features of the game:–

- ★ Matches in 3D graphics
- ★ Transfer market
- ★ Promotion and relegation
- ★ F.A. Cup matches
- ★ Injury problems
- ★ Full league tables
- ★ Four Divisions
- ★ Pick your own team for each match

- ★ As many seasons as you like
- ★ Managerial rating
- ★ 7 skill levels
- ★ Save game facility

# addictive

Comments about the game from press and our customers

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro... To the ordinary person it is an excellent view of what can be done in the field of computer games... The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring... It is a compulsive game but people who cannot love game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option FOOTBALL MANAGER has everything it could... The

original, Addictive Games, certainly deserve the name." *Rating: 19/20* (Practical Computing – August 1983).

"When I first received this game I spent the best part of the weekend playing it. Since then I have returned to it more often than any other. The truly addictive quality of this game is the remarkable way it mirrors the real football manager's problems." (Personal Computer Games – Summer 1983)

"It's my own fault, you did warn me – I am totally and completely hooked on FOOTBALL MANAGER." (Mr. A. Wright – Lancashire)

"It is by far the best software game that I have seen for the Spectrum." (Mr. N. Lincoln – Surrey)

"I congratulate you for a marvellous game which keeps the player enthralled." (Mr. N. Creasey – Gerard's Cross)

"I am writing to say what a great game it is I have spent over 45 hours on it." (Mr. D. Fearn – Gloucestershire)

"Your FOOTBALL MANAGER game is terrific." (Mr. N. Cumming – West Bromwich)

## More than fun and games!

# FIRST STEPS

## with the Mr. Men

by Primer Educational Software

**T**he ever-popular Mr. Men help prepare young children for reading with four simple and absorbing games designed to exercise essential skills as well as entertain.

An easy-to-use, colour-coded key guide is included with an illustrated introductory book, featuring the Mr. Men. For ages 4 to 8

# QUICK THINKING!

by Victor Software

**T**wo mind-stretching, space-age games to test mental arithmetic and nimble fingers.

In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with a handicap option make Sum Vaders equally testing for all family members, from 8 years to adult.

**Robot Tables** challenges the young player to make a series of perfect robots.

Knowing your multiplication tables is the key to controlling the robot-making machine. With a learning mode and a testing mode, Robot Tables is a fun way

for early learners, and more advanced children, to master an important and often neglected skill.

Available now on cassette for the Spectrum 48K, Commodore 64, BBC B and Electron.

# CAESAR THE CAT

by Anderson Software

**M**et Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing a gang of hungry mice eating the family's food. Playing against the clock, you guide Caesar along crowded shelves to pounce on the mice.

A fast, colourful, all-action, arcade-style game with catchy music and a best-score record. Challenging for high-scoring arcade addicts as well as great fun to play for the novice.

Available on cassette for the Commodore 64

Bostrom

[illegible]

It's the year 2243 and the Earth's foremost sporting event is ready to begin. The gladiator's arena is filled with an audience screaming with blood. You are to challenge the planet's champion gladiator in a fight to the death.

Things have changed dramatically from the ancient Roman sporting bottles. Swords and javelins are a thing of the past; laser bikes and guns are now the instruments of death. To defeat the champion, you must trap him within a wall of laser fire by moving your bike around the arena until your opponent runs out of room and crashes into one of the laser trails.

The game can be played by one or two players using the keyboard or with joysticks. It also has a hall of fame hi-score table displayed throughout the game for you to check on your progress.

#### Variables

col% = winning colour  
crash% = flag to see if crash has occurred  
hi% = high score  
joystick% = if joystick is used  
life% = number of lives left

px% ( ) = x position of players  
py% ( ) = y position of players  
sc1% = player one's score  
sc2% = player two's score

## HIRE SPECTRUM SOFTWARE

### CHOOSE FROM OUR VAST RANGE

FREE 24 page CATALOGUE with full details of our range of over 220 different programs for the ZX SPECTRUM. All hired with the consent of the publishers. Whether you prefer to ZAP aliens, get lost in an adventure game, EDUCATE your children, CALCULATE the family finances or COMPILE machine code programs WE HAVE THE RIGHT TAPES FOR YOU TO HIRE

### FAST SERVICE

We stock several manufacturers original cassettes of each tape and can normally despatch your tapes the day we receive your order and we always use first class post

### LOWEST PRICES

We believe our prices are the lowest of any library yet we offer the LARGEST range of titles. TWO WEEKS HIRE OF ANY TAPE COSTS JUST 80p (plus 40p p&pt)

### FREE TAPE HIRE

For a limited period, we will send your first tape (your choice) FREE, so join our library now. You can't afford NOT to! If you've tried another library and are weary of our claims, send a stamp and we'll gladly send you a copy of our catalogue - we're confident you'll join when you see it!

**NATIONAL  
SOFTWARE  
LIBRARY**

200 Mulgrave Road  
Chesham Surrey SM2 6JT

Enclose cheque for £6.00 for LIFE MEMBERSHIP and I understand that my first tape hire will be FREE. It will be 28 days. I'm not delighted with your service you'll refund my membership fee.

## FEB'S FOUL-UPS

Two mistakes cropped up in February's issue

The first program to come under the bugs' attack was *Brky* for the *Atan 400*. Mal and his team have devised a new tactic. Instead of removing parts of the program, they've printed two of each line! When entering the program, just type in the listing up to line 30120 and miss out the rest.

Bug number two appeared in Front Gunner for the Electron. We missed out the last part of the program. But I've managed to persuade Screaming Foul Up to give it back. So if you'd like a correct listing, just send me an SAE.

## PROFESSIONAL BUGS...

Remember the problem with Valhalla? It seems that trying to perform certain actions like throwing the axe when the program isn't expecting it will produce an error message and return you to BASIC. From there, just type LIST and you'll see most of the program!

## THOSE ATARI LISTINGS...

I shall get letters and phone calls (01-276 3684) from Atari owners saying that they can't get *Pirates & Polyps* and *Interstellar Intrigue* to work.

I am as sure as I can be that the programs do work but for all who have asked, here is a fuller explanation of how to put the machine code characters in lines such as 830 of *Interstellar Intrigue* on page 29.

Taking this line as an example, you have to enter line 830 as printed on the correction sheet. Where it says "put characters here", you have to put the characters corresponding to the list of numbers given in the yearbook. To do this:

- 2) Type in as much of the program as you can, and then add the following lines
- ```
10 FOR J=1 TO 11 READ A PRINT  
CHR$(A);NEXT J  
20 DATA 104,162,6,169  
30 STOP
```
- 3) Run the program. It will stop at line 30 and you'll have the characters printed on the screen. Now you need to get them into a program line, so
- 4) Simply use the cursor keys (the 4 arrows) to put the other characters from the sheet in the right place. Eg. the line number, LET etc
- 5) Press return to enter the line into the list.

When you've done this, you should have line 830 correct. Now change lines 10 and 20 to put in the other lines. You'll need to change the DATA and also the 11 in line 10.

If you can't fit all the data on line 20, put half of it on 20 and then start again on 25 with 25 DATA more numbers.

Then save the program, but remove lines 10 to 30 first

## DEMOLITION SPECTRUM

Some of you may have had problems with the graphics in Demolition

If you come across such a Spectrum listing what you do is thus: Type the program in as normal. When you come

Write to me at Bug Hunter,  
Computer and Video Games,  
Durrant House, 8 Herbad Hill  
London, EC1R 5EJ. Or phone  
me on 01-278-3881.

to a graphic character, replace it with a capital G (for Graphic).

When you've finished, save the listing on tape to be safe, and then RUN it. Obviously it won't work: you'll just get a load of Gs printed. So, break in with the Break key.

Now get into graphics mode by pressing caps shift/9 to get a 'G' cursor. First, press REM, then press the capital letters from A to U in order. If any of those letters are used in the listing as graphics they'll be printed as graphic characters. Watch as they appear on the screen.

Then it's simply a matter of replacing all those Gs with the correct character. For example if, in *Demolition*, a fireball

character is printed when you press graphics 'F', then you just change all the Gs to a graphic 'F' where they should be fireballs.

Remember that to put these characters in the listing, you should be in graphics mode so type the line as normal, then when you get to the character, get into graphics mode to type it. Press caps shift 9 to return to an L cursor, and finish off the line.

## MORE ON THE YEARBOOK

Oops! I've found a few more lines which were left out of the Atari version of *Pirates* and *Polyps* from the 1984 Yearbook.

Line 370 should be  
370 ? " \* \* Pirates" ? ? " = polyps" ?  
? "If the projector has locked onto a"  
while 410 is also missing and should  
read

```
4109 "enjoy the game Press any
key" GET#1,A:9"" POKE710,N:POKE
16.64 POKE 53774.64
```

You'll also need  
280 2 1/2" 5 1/4" Laser & Scanner\*

```
290 ? Base 4/2 ? ? ? Press any
key "GET#1.A ?"
1100 O=11F K=2 THEN H =
```

INT(RND(N)\*24+13):GOTO 1130  
The game should now run better, with a  
pause after the first sheet of instruc-  
tions

By the way, line 1055 can be removed

## ZX81 BLOCKADE

Space Blockade from January's issue lost a byte at the end of the machine code loading program.

When you've finished typing the machine code as directed, the program will not end. To finish it, type in an 'S'

# UNBREAKABLE SPECTRUM BROKEN

I've had a couple of letters from people saying that the line zero copyright message for the Spectrum which appeared in Bug Hunter didn't work.

The correct version should be  
POKE (PEEK 23635 + 256 \* PEEK 23636 +  
1) 0

and you should now be able to add a non removable line 0 to the top of your Spectrum Basic programs.

## AND FINALLY...

... for this month, an apology to Texas owners The 3D Maze program in the Yearbook although it works perfectly, will not run without an Extended Basic cartridge Sorry for not making that clear

BY ROBERT SCHIFREEN

# So you want to be a BUG HUNTER?

Bug hunting is a dangerous business — you never know when Screaming Foul-Up is going to sneak up behind you with a heavy Error Message clutched in his claws. But if you think you are up to it, C&VG's resident Bug Hunter, Robert Schifreen, has come up with a few hints and tips which could help you become a trainee Bug Basher. And they could save you the cost of a phone call to our Bug line! However, if all else fails, then either drop me a line at the magazine or call me on 01-278 3881.

Occasionally, we have to admit, an error creeps into one of our listings. More often, we find that the person typing the listing has made a small typing error. Easy enough to do! Next time you have problems with one of our games, try out some of the suggestions below before phoning Bug Hunter. If the computer prints an error message when you type RUN it could be a very small typing error. Even mistaking a comma for a full stop could alter the way in which a program runs.

So next time the computer rejects an afternoon's hard typing and prints one of those rude messages, check it with the list below. You never know, it could be just the solution.

## **Syntax Error**

This is the most common error message. It means that the program line is not recognised by the computer as being 'RUN'able. This may be because you have left out a character eg a bracket, or spelt a word wrongly eg INPUT instead of INPOT. Many syntax errors are quite hard to spot as one very small mistake can cause a whole line to be rejected. Check especially the commas, colons and semi colons.

## **NEXT WITHOUT FOR**

A FOR-NEXT loop is a special part of a Basic program. There must be a FOR statement, then part of the program and then a NEXT statement. If the program comes across a NEXT but has not been through the matching FOR then you'll get this error.

As well as incorrect typing of the FOR and NEXT lines, it could be that your GOTOs and/or GOSUBs are wrong. This might make the program jump to a NEXT without going through the FOR first.

## **VARIABLE NOT FOUND**

On some computers, all variables are set to zero when you type RUN. On others, though, they are not given a value until you give them one. So if you set the value of X to 10 and then, further down the program, make a typing mistake and call it Y, you'll get this error unless Y also has a value. Both systems have advantages. If your program uses

a lot of variables, it's annoying to have to set them all to zero. It does cut down on typing errors, though.

## **BAD MODE**

This error is found on BBC micros and is similar to Out of Memory. It can mean that there is not enough memory for the selected mode. Each of the graphics modes on the BBC takes up a different amount of the computer's memory. This means that the size of the largest program which you can write depends on which graphic mode you use.

## **OUT OF MEMORY**

Quite self explanatory, really. It means that you haven't got any memory left. This usually means that a program is too large to fit in the machine and that you've run out of RAM. However, there are some typing errors which will result in this error, especially DIM statements which are used to reserve memory for data. If your DIM is too large then you'll find yourself running out of memory.

The computer stores a number in memory which tells it how much RAM it has left. If you change this number by poking into it inadvertently, then you'll get the impression that you have less (or even more!) RAM left than you should have.

## **DIVISION BY ZERO**

In maths it is impossible to divide any number by zero. So if you try to do so in your program you'll get this error. It may be that you've typed the name of the variable wrongly. If your machine sets all variables to zero at the start and you type a variable name that has not been used in the program it will have a value of zero. If you then try to divide by this variable, you'll get this error.

## **TYPE MISMATCH**

You have referenced two types of variables in the program line and they are of different types. String variables have a dollar sign after them while numeric ones do not. It may be that you're trying to store a letter or word in a numeric variable.

## **BAD SUBSCRIPT**

An array has been dimensioned with a DIM statement but you are trying to access a part of the array which does not exist. For example, the line DIM A (100) will give array A 100 elements. If you then try to PRINT A(103) you'll get bad SUBSCRIPT. (The number in the brackets is known as a subscript). If you get this error, check any lines which deal with arrays, especially the DIM statements.

## **REDIMENSIONED ARRAY**

Once you have set up an array with a DIM statement, you cannot set it up again without clearing it first, or typing RUN which does the same thing.

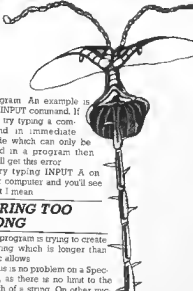

If you get this error when typing a program from a magazine then check especially for typing errors in DIM statements. Check all your GOTO and GOSUB statements as well, as a typing error may be making the program jump back to a DIM.

This error message may also be called a DD error, which stands for Double Dimension. (No jokes about it working wonders, please)

## **ILLEGAL DIRECT**

There are two ways to type in a Basic statement. Either with a line number as part of a program or without one, known as immediate mode.

There are commands, though, which can't be entered in immediate (or direct) mode but only as part of a

program. An example is the INPUT command. If you try typing a command in immediate mode which can only be used in a program then you'll get this error.

Try typing INPUT A on your computer and you'll see what I mean.

## **STRING TOO LONG**

The program is trying to create a string which is longer than Basic allows.

This is no problem on a Spectrum, as there is no limit to the length of a string. On other microcs, though, strings usually have a limit of 255 characters. Trying to add characters on to the end of a string without clearing it first will often produce this error.

In standard Basic (but not on the Spectrum) the same goes for elements of string arrays. On the Spectrum you cannot have true string arrays.

## **UNDEFINED LINE**

A GOTO or GOSUB statement points to a line of the program which does not exist.

On some computers, the Spectrum for example, if a line does not exist, the program will jump to the next available line without producing an error.

## **REDO FROM START**

Not exactly an error message, this, but it will happen if you try to enter a string from the keyboard when the program is expecting a number.

If the program asks for a number and your input contains any characters apart from the numbers 0 to 9 you'll get this message.

## **RETURN WITHOUT GOSUB**

Similar to NEXT WITHOUT FOR. This is a pair of statements which must occur in order. If the computer reaches a RETURN but has not encountered a GOSUB on the way then you'll get this error.

## **OUT OF DATA**

This is one of the most common errors in many Basic programs you'll find lines with the word DATA at the beginning. These contain numbers or letters which the program needs to be able to run, and are read into the program with a READ statement. Each time there is a READ, it will get the next item from the DATA line. But, if there is a READ but no more DATA left to be read, you'll get this error.

If this happens, check the DATA lines to make sure that they are typed correctly. Each item of DATA is separated by a comma so if you miss one of these out you will merge two DATA items into one. This means that although the DATA is all there, it will appear one short to the computer.

## **CAN'T CONTINUE**

When you interrupt a program with BREAK or ESCAPE you can usually restart it by typing CONTINUE. But there are some occasions where you can't continue. For example, if you alter the program in any way then the machine's memory will be rearranged to fit it in. Therefore all previous data is lost and you can't continue running the old program.

If you are going to type something before continuing, eg printing the value of a variable, make sure that you type accurately as you can't continue after a SYNTAX ERROR.

## MORE FINDINGS FROM THE FAIR

Further to our report in the January issue on the dark doings of the machinery at the computer fair, another chunk of printout provides puzzling details of Tom, Sue, Alice, Bill and Joe whose surnames, not necessarily in correct order, are Bilkins, Williams, North Smith and Thomson. Each was attracted by a special feature of a machine — watertight, 32 bit, own power, telepathic, makes the tea.

The readout tells us.

1. No form of liquid was mentioned in the advertising of Bill's computer nor of the one bought by Bilkins.
2. The lady called Thomson bought her computer from stand 3. The other lady did not make her purchase from an adjacent stand.
3. Joe did not buy from an odd numbered stand. The watertight computer was not on stand 2.
4. Mr North bought from an end stand.
5. Alice's computer produces its own power. The telepathic computer was displayed on stand 4 and the machine on stand 1 was not bought by Williams.
6. Sue's computer was not on the stand adjacent to that visited by Tom Smith. Can you give the full name of each buyer, the machine they bought and which of the stands 1 to 5 it was on?

## FALSE ARREST

At least in their latest job Sluffy's gang slightly improved on their previous effort. Then they had backed their van through the window of Todd's Videos before they read the notice fixed to the door which informed visitors that Todd's had moved to the High St.

Thus time the gang's driver did manage to reverse into a thriving computer shop but, in going too far, wrecked most of the main display. As the startled owner just watched, one of the gang ransacked the shelves and passed what he fancied to another who loaded it into the back of the vehicle.

It was a pity too, that they had pre-arranged the signal to leave by means of a bang on the van's roof, for when a collapsing shelf hit the van the driver roared off — leaving his two companions staring in wild disbelief through the smashed frontage.

When invited later to visit their local police station and engage in frank round the table discussions, the gang knew that they could not deny the robbery but hoped, if they could confuse the law as to who took which part, to throw some doubt in the minds of the jurors and so lessen their sentence.

|            | Tom | Sue | Mics | Bill | Joe | Watertight | Telepathic | 32-bit | Own power | Makes tea | 1 | 2 | 3 | 4 | 5 |
|------------|-----|-----|------|------|-----|------------|------------|--------|-----------|-----------|---|---|---|---|---|
| Bilkins    |     |     |      |      |     |            |            |        |           |           |   |   |   |   |   |
| Williams   |     |     |      |      |     |            |            |        |           |           |   |   |   |   |   |
| North      |     |     |      |      |     |            |            |        |           |           |   |   |   |   |   |

| First name |     |     |      |      |     |            |            |        |           |           |   |   |   |   |   |
| Surname    |     |     |      |      |     |            |            |        |           |           |   |   |   |   |   |
| Feature    |     |     |      |      |     |            |            |        |           |           |   |   |   |   |   |

They had agreed that their powerful bar would tell the truth all the time and when questioned he made two true statements. One of the others told one truth and one lie and the third member told two lies.

**'AMMER** I DROVE THE VAN  
**BASHER** I GRABBED THE GOODS  
**BASHER** I GRABBED THE STUFF  
**CLOGGER** DROVE THE VAN  
**CLOGGER** RASHER DROVE THE VAN  
**I** LOADED THE STUFF

The police weren't confused for long and, hopefully, you won't be either.

Can you just tell us what part each man played in the raid and which of them told the truth both times, which lied both times and which was half honest?

The first six correct answers out of

the Computer and Video Games Magazine Bin will receive prizes they will keep you puzzling even longer than Teylor Travers's mind boggling brain twisters. Thanks to our friends at Vulcan Electronics we've managed to get hold of one V1000.

Not that they are not space craft from another galaxy. These nifty little robots are a combination of Master mind and Simon. But we're not saying any more about them — mainly because we haven't been able to beat the thing yet!

Anyway get your answers to us by March 18th and you could be the proud owner of a V1000. Send your answers to: Editor, Street Contest Computer and Video Games, Current House, 9 Northolt Rd, London EC1P 8PT.

# SPRING OF EIGHTYFOUR

In how many different ways are these future woolly jumpers for M&S telling us that this is LEAPYEAR 84?

Can you complete this square so that every straight line of four numbers adds up to 30 and so make sure that 1984 is a magic year (there are, naturally, two ways to do it, the easy and the rather hard slog)?

## GET YOUR TEETH INTO THIS ONE!

Introduced by the man himself . Terry Blank! Settle down now, fan and don't get excited — you never know what it does to your liver, or your onions. Today, a special edition of the dreaded Head To Head. Each line is a clue to a word thus blank teeth could be false teeth, or shark's teeth or canine teeth or even Edward teeth (you remember him, don't you?)

One of the several choices which flow into your mind may be the right one and that is entered into the picture thus the first letter into the left-hand square, the last letter into the right-hand square and the remaining letters go in the spaces in between. Go that? Good if you choose the right words then an incredible surprise will appear — the first letters reading downwards, will form a word as will the last letters. And

these two words are used by some bond of association in the English language — like CHIP and SHOP. Eugene, roll back the screen and reveal the first and easiest of our samples.

Blank water

Blank glasses

Old blank time

Blank fair

We'll done! Another, if you please . .

Blank time

Blank rubber

Day blank

Cor blank

Left blanks

And now the third, which has JY lost for words. I can tell you.

Blank bone

Blank freeze

Blank coat

Storm blank

Hold your blanks!

# MISSION-1

## BECOME A SECRET AGENT

## PROJECT VOLCANO

Mission Software's complete package on Project Volcano is probably the most advanced Adventure/Thriller Game Package you have completed this year. It is not just for the dedicated game player, but for those that want to get involved in Secret Codes - Messages and the deadly side of the British Intelligence and the K.G.B. IT IS A MUST FOR THE SINGULAR SPECTRUM and DRAGON 32 HOME COMPUTER OWNERS.

When you receive your Adventure Game from Mission Software Limited, included in the package is your Passport to the international workings of the Secret Agents. Your personalised Passport will enter you in registering the K.G.B. network in the Soviet Block Countries and vital to the success of your mission.

Command Headquarters will give you information that other Agents have recorded together with their Communication Log, Mission Instructions, Secret Messages, Codes and Diagram. Full Starting Instructions and other Secret Data.

IT IS UP TO YOU TO BREAK THE CODE AND BECOME A SUCCESSFUL SECRET AGENT. You will be able to see your ability and to guarantee many hours of enjoyment.

Only Mission Software Limited is the only company that supports its Field Agents with a mass of Secret Information to make the Mission exciting and enjoyable which makes it a must in Computer Games.

- We know your friends will want to become Secret Agents and use your game, we will be quite happy to supply them with their Passport and Documents for £2.95 per set. This was you always get for your personal Passport and Secret Information.
- The moment you tell us you have completed your current assignment we will advise by Secret Data signals of how to penetrate one of the World's most secret areas.

- I obtain your Game and personal Passport with 63 or Secret Documents, send a Cheque or Postal Order for £6.95 inc. V.A.T. with the Coupon at the back of this advertisement.
- ORDER MISSION 1 TODAY AND JOIN THE GROWING NUMBER OF SECRET AGENTS OPERATING FROM COMMAND HEADQUARTERS.

Software and peripherals available for all the above items. Software is  
also available for the BBC DRAGON SINGLAIK ZX SPECTRUM  
SINGLAIK ZX81. Please send LARGE S.A.E. for lists stating type of  
hardware you use.  
Free p&p (U.K. only)  
Please send cheque payable to C & R Computers and please allow 21  
days delivery.

Program Extra is very interested in improvements to the listings we've published and conversions too. So if you think you can improve on a C&VG game, then I would like to hear from you.

C&VG has been experiencing a strange new phenomenon — a lack of good BBC games. What once was a flood has now turned into a trickle of good listings. C&VG are always on the look out for good games for all popular micros. So if you've got a game lying around, please don't hesitate to send it in, together with a software form from the back of the magazine and a list of variables and instructions.

R P Burgess of Caterham, Surrey has sent Program Extra a short program to disable the Dragon 32's break key:

After running this program, the break key will appear not to work. Very handy, especially if you don't want peeping Toms taking a sneaky look at your masterpiece of programming. If at any time you need to re-enable the break key, just type `poke 410,57`.

Add the following lines to the listing:

```

213 CALL CHAR(140, '0000000000
30 30 30 30')
232 CALL CHAR(141, '00000000
COCOCOC')
280 CALL CHAR(112, '0000030F
3F3FFFFFFFFFF3F070000000000000
0F8FCFFFFFFFEFCF")
300 CALL CHAR(121, " ")
310 CALL COLOUR(14,10,1)

```

And then finally, delete the lines 200,210,220,230 from the original listing

HIS issue will prove a real hit with Sharp owners who are addicted to fruit machines — see Slot Machine on page 96. One small problem though, we've lost the name of the author. So if he would like to claim his ten pounds, we would be most happy to hear from him on 278-6856.

R P EDWARDS of Wrexham has sent Program Extra a tip that will give Spectrum owners a little more time

Programmers sometimes require a certain time to test to see if a key has been pressed. This can be achieved by using the statement: LET T=7997 USR7997.

The variable T contains the time in sixtieths of a second. The computer will wait for up to two minutes and 40 seconds for a key to be pressed which is very useful for displaying instructions. The user can then decide to read them or press any key to move on to the rest of the program.

HAT about wraps it up for another month except to remind you that Program Extra is interested in tips, hints or program improvements for any of the popular micros. Remember we pay at least £10 for each one we use.

Program Extra is also particularly interested in receiving articles on programming or any computer-related topic that you may have written or are thinking of writing.

# PROGRAM EXTRA

## GOING THROUGH THE PILE

During the past month I have been playing my way through a pile of recently published Adventure games, and now find I run the risk of courting unpopularity among non-Spectrum owners!

But on this occasion, the anti-Spectrum lobby should hold their fire. The trouble is, there are so many Spectrum Adventures around that the poor Spectrum owner deserves some extra help through a veritable minefield of software. And a minefield it is, for the Spectrum games I have played, with one exception, are so weak that if there was ever an Adventure equivalent of 'The Worst of Hollywood', then many would feature.

Spectrum owners are, at the time of writing, unable to set themselves a benchmark by playing a Scott Adams game, so it is only right that the worst as well as the best should be mentioned. Which leads to an interesting thought! Perhaps a new method of rating Adventure games could be points in a range of one to ten on the Scott scale. A universal measure of Adventure quality — 'This game rates 3.25 Scotts' — would, perhaps, speak for itself. In that case, a number of Spectrum games listed here wouldn't merit more than a handful of Scotts between them!

## QUITE A SPECTRACLE!

Following closely on the heels of Valhalla, but from Dore and relatively unassuming, comes *The Oracle's Cave*, for Spectrum (what with Dotje and Oracle, somehow this seems the wrong micro for the game).

Since animated graphics are again the order of the day, comparison is inevitable. In Oracle, the graphics are used in an entirely different way. Your little figure not only moves around, but the location 'pans' with him, so there is no sharp cut-off of one picture to be replaced by another thus movement is smooth and continuous.

Response is last compared with Valhalla, making the game a pleasure to play. At the outset, you may choose one of four quests — obtaining a treasure

guarded by a mummy, centaur, dragon or knight. You must collect, in all, 40 units of treasure to complete the quest.

The game is played in real time, and the maximum playing time is one hour (Oh happy reviewer!) Each game starts off with a new network of caves. Commands are entered as single letters, and the permissible options are displayed at all times. For example if you type 'in' for move, then your next options might be l, r, u, d, s meaning left, right, up, down and secret passage.

Unfortunately, this very good game is let down by its lack of instructions to the user. The cassette inlay gives some instructions, true, but they in no way make it clear exactly how to use and manipulate things, nor how to use or interpret the cave map inset to the bottom right of the display. This can be easily overcome, of course — produce an instruction booklet quick, Dore!

*The Oracle Cave* is from Dore for 48k Spectrum, and a modest £7.95

## CENTRE DUNGEON

The instructions of Middle Kingdom lead separately up to 26 hex, and are extremely complicated, occupying an incredible 11 screens. They are also written in an extremely bad style with poor grammar and spelling. If you can remember them after the main program has replaced them in memory, you are

probably the type that can quote the complete works of Shakespeare.

The main part of the game is reminiscent of *Dunconquest* games but, being on the BBC, is much faster than the TRS 80 *Hellfire Warrior*, and enlivened with colour and sound.

First you choose your character, weapons, and armour and then move around from room to room, doing battle with goblins and the like, using the special function keys to select the type of blow you wish to deal the enemy. Optional speed of messages and skill level is provided as well.

Not really my cup of tea, but a very good game of its type. Pity about the instructions — why on earth couldn't they have been committed to paper? Perhaps the misspelling and poor grammar would put people off buying the game if seen in advance?

*Middle Kingdom* is from Pro-Software for BBC priced £7.95

## MULTIPLE DODGE

Arcade versus Adventure is often a theme of readers' letters and, in *Dodge City*, the two are brought together.

First an arcade game must be played up to skill level 12. You ride across the desert collecting mail, pursued by bandits, avoiding cacti and oncoming bullets. As you complete each alternate skill level, you are presented with a clue to the Adventure, and this culminates in the receipt of the pass word to enter the Adventure section.

Into the Adventure itself then, and you find yourself in Dodge City, about to face a murder charge, and all the evidence stacked up against you. You must choose (1) to make a break for it or (2) submit to arrest. You choose (1) and find yourself looking into the guns of the Deputy Sheriff. You must decide (1) to raise your hands and surrender or (2) jump from the balcony.

Get the picture? Yes, at last a real multiple choice adventure. It has instant 'wide-screen' graphics and a good sense of humour. It would probably make a good board game, and is certainly to be recommended for waffles wishing to boost of their Adventure prowess. Adventurers leave well alone. And the arcade game? (1) you like it or (2) you don't.

A NOD IS AS  
GOOD AS A  
WINK!  
Collect five treasures outside Jeru-  
salem and, making sure you have  
the keys, touch button on the way  
to paradise, Amen!  
Some of the riddles of the castle  
may be answered by taking the  
correct exits in the forest — E, N,  
W. If you go east first, throw the  
coin down the well and wait!  
Stun only, and transport, then  
follow the sound through the  
snowstorm!

BY KEITH CAMPBELL

## TROUBLE IN TANDEM — TRS-80 v THE BEEB

Back in 1981 there appeared in the Motimer catalogue a machine-code Adventure for the TRS-80 called *The Golden Baton*. I particularly noticed the entry because it was next to one for my first Adventure, *Fairytale* (a more feeble effort written in Basic!). In those distant days, aons ago in terms of micro developments, the TRS-80 was THE machine for Adventure, and a really successful game was one written in machine code.

*Golden Baton* was the first of the *Mysterious Adventures*, which was to prove to be the nearest home-grown Adventure series to that of Scott Adams. These games are now available for a wide variety of micros (it is easier to list those for which there isn't a version!), and led to the birth of Brian's company, Digital Fantasia. My own entry was the first of a short series of three, and led to — well, how do you think I got to writing this? So although a number of *Mysterious Adventures* have been reviewed in these pages, I thought it about time to call in on the one that started it all off.

In view of the special nature of a first-in-the-series game, I decided to depart from normal practice of reviewing one version, and play 'in stereo' as it were. Thus, Ruth, my

wife, sealed at the TRS-80, had a head-start by loading in from disk, whilst my BBC tape wound slowly through the cassette player.

The golden baton is the object which must be found to complete the game and, of course, there is no hint of such a device at the outset. The Adventurer must solve a number of puzzles to get the wherewithal before he starts his search in earnest. Innocent-looking objects can reveal some useful surprises when examined, and so care is needed not to overlook anything lying around. To a certain extent, that is the formula — search, find, use. But the use of things found requires some deductive reasoning, thereby resulting in a rewarding game.

However, the most fascinating aspects of *Golden Baton* came to light when comparing the two versions being played simultaneously. To start with, the BBC version follows more closely the Scott Adams-type split screen, whilst the TRS-80 version had text in the lower half that did not scroll, leaving the player without a reminder of his previous commands.

The vocabulary varied, and whereas Ruth could not 'GO' anywhere, I, on the BEEB, could do that easily. Of course, it is to be

expected that some descriptions would be altered, to suit the difference in screen-width, but what we found was a major difference in command vocabulary! There was I with some much needed salt (no problem finding it!), and Ruth with dictionaries and a Thesaurus desperate for more synonyms, beginning to suspect there was no salt in her version! Meanwhile, there she was carrying absolute armloads of objects around, whilst I could only manage a mere few!

In the final analysis, we agreed that the plots were identical, but a step-by-step solution would vary from micro to micro. In converting his series to run on the BBC, I can well appreciate the author's awareness, in hindsight, of possible improvements to the logical command words and a tightening of the inventory limit to the practical minimum. But I must say the TRS-80 version scored in having more detailed descriptions than the BEEB, albeit in monochrome.

Overall, this was a fascinating exercise and revealed a game that can be highly recommended. But I couldn't help wondering how the Spectrum version differs from the Atari version and the Commodore 64 version and...

Dodge City is from Phoenix Software for 48k Spectrum, priced £9.95

### URBAN BORE

Another game for the Spectrum I would not borrow, let alone buy, is *Urban Upstart* from Richard Shepherd Software.

The idea is good enough — quite original in fact. You must escape the environs of Scarthorpe, a town so depressed that the unemployed queue up to queue up for a job.

The trouble is that the implementation runs the idea. The top of the screen displays a picture of each location, starting off in your house, and progresses eventually out and around this neglected town.

When you are outside a fish and chip shop, neither CHIPPY nor SHOP are recognised, and a bank, pictured and described, goes unrecognised likewise. I didn't bother with Arthur's bookshop.

There are plenty of locations and pictures, and if you are hypnotised by watching your Spectrum slowly fill in your screen with blocks of colour, then you'd be in a trance in no time, for there is no 'graphics-off' switch, and to move around takes upwards of ten seconds a go.

To cap it all, should you catch pneumonia out on the cold damp streets, an ambulance will take you to a hospital which turns out to be a pessimistic maze.

All this frustration caused me to type nasty words at the game, whereupon I was whisked off to goal on an obscenely charge. Non-moving commands are answered fairly promptly, so I tried my hardest to get out, all to no avail. Unfortunately for me, I had lost faith in the game and decided to pursue it no further.

*Urban Upstart*, is from Richard Shepherd Software for 48k Spectrum, priced £6.90

### A THING IS A THING IS A THING

*The Warlock of Firetop Mountain*, from the Puffin Personal Computer Collection, comes in a card sleeve, complete, as might be expected with a name like Puffin behind it, with a full-length paperback.

The package is billed as "A fighting fantasy game with revolutionary animated graphics" AND the original best selling book.

Well, forgive me for associating a fantasy game with Adventure, and for assuming there would be a connection between the book and the accompanying Spectrum cassette.

The book is best described as a 'multiple choice' Adventure, where, by use of a dice and selecting the next move from a choice of two or three, the player proceeds from paragraph to paragraph, moving on to the paragraph indicated by his selection. This means constant and rapid page turning, as there are 400 numbered paragraphs, and the result can perhaps be described as an Adventure story read in random order.

Not so the software, which, not unreasonably, I anticipated would be a computerised version of the book. It is not. The game is almost identical to *Halls of the Things* from Crystal Computing.

Guess who wrote the program? Messrs Mothershead and Bratell of Crystal Computing. Phen! What a coincidence! And you bought both? Ever been had?

*Warlock of Firetop Mountain* for 48k Spectrum from Puffin at £6.95

## REAL TIME WIZARD

One of the better games in the pile was *Keys of the Wizard* which loads on a Dragon 32.

This adventure is played in real time with a choice of three skill levels. Sounds like an arcade game, doesn't it? Well, this one is definitely a text adventure! The skill level determines the difficulty in finding treasures, the ease of killing adversaries, and the activity of special nasty tricks. It is advisable to start at level one to get a feel for the game before progressing and, at this level, it is estimated the game will take between two to six hours to complete.

The cassette inlay gave a list of verbs, creatures, weapons and abbreviations, the latter including a command to pause the play.

At the top of the screen is displayed the time, physical status of the player and creatures, and current score. The conversation scrolls beneath and has a fast response.

The adventure network is seemingly vast, but unfortunately I found the voca-

bulary to be fairly limited, and got the impression that most locations were compiled from a random list of descriptions and exits.

Not a bad game though, one that is worth persevering with, and coming back to.

*Keys of the Wizard* is from Microdeal for Dragon 32 priced £8.00.

## DEFINITELY NOT SCOTT!

EDITOR — believe it or not, spelling is as loud!

In the hotel lobby

The walls are elaborately decorated

Examine walls — You can't.

In the hotel room!

There is a bed in one corner with a

dirty mattress and a single pillow

Lee down — you can't

Sleep — you can't.

Examine pillow — You can't

Lift pillow — OK

Should you now LOOK you will see a small key

In the stable

A saddle hangs on the wall  
Examine saddle — You can't  
Get saddle — It isn't here

In the Assay Office

There is an upturned thing cabinet

Open cabinet — There isn't one!

You've heard Scott Adams games will soon be available for the Spectrum, haven't you? Well this isn't one of them! Described as a graphical adventure, all outdoor locations are displayed on part of a map — pretty redundant stuff since all the necessary descriptions and exits are provided in the text anyway.

*Ghost Town* is written by a teeny bopper with no dictionary. John Pickford, How Virgin Games have the nerve to give such trivia the name of a great, I cannot understand. Perhaps they don't even know there is already a *Ghost Town*? They should stick to producing records, and leave Adventures to those with some knowledge. Or could it be they are hoping to confuse Spectrum owners?

*Ghost Town* from Virgin Games for 48k Spectrum, a rip-off even at £5.95.

## HELPLINE

Simon Marsh drops me a reassuring line every now and again, and has come up with the theory that Adventure players are the best computer users — kind, friendly, and always helpful!

James Bibby has written from Birkenhead offering to help with quick tips, and specifically writes to help Denis Field, stuck in *Castle of Riddles*. His tips, and those from Gordon Keenan of Glasgow, are printed upside down.

Dragon owner Mark Terry of Stoke-on-Trent offers help for W. Pooley in Jerusalem, but has come across an unexpected problem himself. He has all the treasures and has got through the gates, but nothing happens! Phew!

I try to keep abreast of new Adventures, yet almost every month I get a desperate plea or two about a game that I have not heard of! Blade of Blackpool is one

example, so can anyone help R. Gay from Rogerstone who wants to know if he can get past the landslide or monster, or nearer to the trees that emit an eerie light? Ken and Linda Thompson up in Chesterfield, on the other hand, are stuck with the carnivorous plant, can't find the jewel of Setnam and are stuck in the quicksand! To make matters worse, they ventured into *Wizard and Princess*, and are stuck in a room with a crazed toad!

Labyrinths of La Coshe is troubling Mark Chatley in Tunbridge Wells, for he can't get through the passage past the waterfall.

Remember Stephen Donoghue and the *Ghost Town* horse? His claim to completing *Strange Odyssey* in six days led Brian Pickarney to ask "Is he a hyper-intelligent Skol-drinking mega-being from a distant planet?" Poor Brian has been eaten by a slime tree,

born apart by a black hole, and decided that the dice hound must be a Skol drinker, as he won't take the Saurian Brandy! All leading to a score of zero! Well, you're lucky Brian — you don't make any mention of a methane snowstorm!

It only seems a few weeks ago that I was introducing you to Simon Clarke, who has been helping me with your problems since last September, and was a major contributor to January's Book of Adventure supplement. Well, sadly we must now say goodbye to Simon, who is leaving to start up his own software company, Adventure Zone Ltd. Thanks for all your help, Simon, and the best of luck in your new venture!

Meanwhile, if you have a helpful hint or a persistent problem, write to me at Adventure Helpline, Computer & Video Games, Durrant House, 8 Herbat Hill, London EC1R 5JB.

# There must be more to a micro than zapping monsters

See how much more when you plug into Micronet 800—a multi-million pound database that lets you play games as well.

#### Micronet 800 helps your micro come of age

It is the sophisticated network that many popular makes of micro can plug into via the telephone, giving home micro users new horizons to use and explore.

#### Micronet 800 lets you communicate through your micro...

By linking you into a network of thousands of micro users who always have something new to say to each other Through Letters to the Editor, Clubspol (for computer user groups), Swapshop (our electronic bulletin board) and electronic Mailbox, Micronet keeps you in touch with other people who want to do more with computers than just play games.

#### Micronet delivers to your micro our electronic newspaper and PRESTEL

Newsfashes give you news and reviews on new equipment, software and computer applications. A Microbase dedicated to your type of micro contains technical hints and tips. You also have access to other facilities on Prestel: Homebanking with Homelink, world and business news, teleshopping and much more.

#### Micronet 800 gives you software

Offering you some of the best software bargains around through your phone line and straight into your computer. Scores of educational and utility programs are included. And a wide range of terrific games software. Many of which are completely free and constantly changing every few weeks—just in case you want to take another zap at those monsters again.

# PSYCLAPSE & BANDERSNATCH

COMMODORE 64  
48K SPECTRUM

## PROGRESS REPORT.....

It was only a few short weeks ago that (from left to right) Ian Weatherburn, John Gibson, Eugene Evans and Mike Glover were given their original brief....'Produce the two most exhilarating computer games ever'.

The tension is beginning to show; their once smiling faces are now drawn and haggard, their eyes are bloodshot, PSYCLAPSE & BANDERSNATCH are beginning to take their toll.

The atmosphere in 'Imagine House' is electric; will they succeed? Can they maintain their sanity? Will they crack under the mental burden?

Rumours abound they're adventure games, they're arcade games, they're completely original concepts in computer entertainment.

CAN YOU CONTAIN YOUR PATIENCE?

## CONSUMABLES TO DATE.....

|                      |                                         |

All English Software programs are sold according to the English Software Terms of Trading, copies of which are available on request.

## THE SOUND OF MUSIC

I can hear music... sweet sweet music! Don't worry we're not about to unleash Big Hunter's musical talents on the world. Not yet anyway! Next issue we're running a special series of music synthesiser programs for the top micros — including the Spectrum and BBC. We're going to ask you to use these programs to write us a tune and enter it in our great music contest.

We've asked Vince Clark of Yazoo and The Assembly to judge your tunes and pick the winners for us. The first prize will be very expensive and very exciting. But you'll have to buy the next issue of *Computer and Video Games* to find out just what it's going to be.

Keeping up the music theme we're going to print a wonderful 'sound to light' program again for many popular micros. This will enable you to listen to your favourite records while watching a wonderful light show on your TV.

We will also take a look at some of the professional music synthesiser programs available in our Reviews section.

While we're on the subject we will

be asking Vince Clark just how he uses computers to make music in a special star interview. Meanwhile over in the United States of America the giant Consumer Electronics Show has just finished and *Computer and Video Games* was there to bring you all the hot news from the other side of the Atlantic. If you want to know about the latest games, new computers and even Robots, pick up our April issue.

Plus, finally, the winners of our Golden Joystick Awards — a report and pictures on our grand presentation dinner in London last month.

There will be all your favourites too — plus some of the best games listings around for almost every micro under the sun. So don't forget to rush around to your newsagent and sing for your copy of *Computer and Video Games*.

## STAR-CROSSED BOOK OF GAMES

Where were the stars then? The competition stars in the Book of Games.

We have to own up — we simply missed them out! Well, it was Christ mas when we put the Book of Games together after all. Perhaps we all had one lemonade too many that day.

Anyway, don't despair, the competition is still open — even if you don't know what games it applies to!

If you get a top score on one of the games, simply fill in the coupon you'll find on the Book of Games contents page (we did manage to remember the coupon! cut it out and send it to *Computer and Video Games*, Book of Games Hi Score Contest, Durrant House 8 Heribal Hill, London EC1R 5EJ).

Top scorers on the games will get a games tape for their computer from the C&VG treasure chest which is brimming with goodies!

Here's a list of the games you can enter on: *Chopper Chase*, *Cavern Raider*, *Front Gunner*, *Zombies*, *Millman*, *Frogs*, *Snakes*, *Psycho Circus* and *Meteor Attack*.

Anyway because of the hitch, we've moved the closing date which is now March 18th. So don't delay enter today!

To my newsagent Please deliver  
reserve me a copy of *Computer  
and Video Games* every month.

# 'UGH BUG ZAP ZAP QUAK!'

"UGH, BUG, ZAP, ZAP, QUAK,"....Now, for the first time since late last week, you too can learn this amazing new phrase which is guaranteed to get you the very best new software around. "Ugh" has been rated the best-ever game for the Dragon 32 and is now selling like hot terradactl eggs for the CBM 64. "Bug Squad" for the CBM 64 will leave you a little less sane after defending your garden from a host of loony bugs, a manic magnet, a mutant lawn-mower and bottles of "Essence of Spinach". Regain very little of your sanity as you zap away with "Zoids", our latest best-selling shoot-em-up game for the CBM 64. And finally get yourself locked away for playing "Quak Attak" which may or may not come complete with a nice padded jacket. Fly your turkey as you do battle with your laser lance against the Loons of Latvie on their menacing white ducks... And if you own a Spectrum, you'll be amazed at "Starblitz", our astounding new 'Truly Arcade Perfect' game for your machine which puts all similar games to shame.....

Ugh is £6.95 for the Dragon 32, £7.95 for the CBM 64,  
Zoids, Bug Squad and Quak Attak are just £7.95 each (CBM 64)  
and Starblitz is only £6.95 (Spectrum).

Softtek's Software is available at most major outlets, including selected branches of the following: W.H.Smith, Boots, Dixons, Tandy Dealers, Lightning Dealers & Selfridges as well as through our nationwide dealer network.
